Prospectus and other material on funds

The prospectus includes general and fund-specific information about the Nordea investment funds managed by Nordea Funds Ltd in Finland. According to the Finnish Act on Common Funds, the statutory fund material is composed of this prospectus and each fund's Key Information Documents (PRIIPS KIDs) and fund rules.

General SFDR product information on article 6 funds is available in SFDR appendix I to the prospectus. Fund-specific SFDR product information on article 8 funds to be provided before the contract will be entered into is presented SFDR appendix II to the prospectus.

Investors are advised to familiarise themselves with the prospectus with its SFDR appendices, the fund's KID and the fund rules, which together constitute the whole, before making an investment decision.

Investment fund

"Investment fund" refers to an investment portfolio mainly consisting of securities. The owners of a fund are the persons, organisations and foundations having invested assets in the fund. The ownership in a fund is fractional. The investment fund is managed by a management company.

The finances of a fund are kept separate from the assets of other funds, the management company, Nordea Bank Abp or Nordea Group. The assets of a fund cannot be used to cover the debts of the management company or the bank. A fund cannot go bankrupt, but depending on the market situation, the value of a fund unit can increase or decrease.

Subscriptions and redemptions of fund units are executed at the net asset value (NAV) of the unit, which is calculated on every banking day by deducting the liabilities from the market value of the fund's assets, and dividing the resulting net value by the number of outstanding fund units. The cut-off time for fund orders and the valuation times of funds are described in the rules.

Nordea Funds Ltd

Nordea Funds Ltd and its branches in Norway, Sweden and Denmark are responsible for managing Nordea's funds registered in Finland, Norway, Sweden and Denmark.

Nordea Funds Ltd (the 'Management Company') operates under a licence (UCITS licence) granted by the Ministry of Finance of Finland. The Management Company is engaged in investment fund operations and other activities materially related to them.

The Finnish Financial Supervisory Authority has granted the Management Company a licence (AIFM licence) to act as an alternative investment fund manager (AIFM) pursuant to the Finnish Act on Alternative Investment Funds Managers.

The Management Company invests assets acquired from the public on behalf of unitholders in accordance with the fund rules approved by the Finnish, Danish, Norwegian and Swedish Financial Supervisory Authorities. The Management Company acts in its own name on behalf of each fund and exercises the rights related to the assets in the fund.

**Nordea Fund Management, Filial af
Nordea Funds Oy, Finland**
Nicolai Eigtveds Gade 8, 1402 København K

Rasmus Eske Bruun is responsible for the operations of the branch
Organisation number 35640851

The Management Company has a branch in Norway:

Nordea Funds, Norwegian branch
Essendrops gate 7, 0368 Oslo

Björn Stolpestad is responsible for the operations of the branch
Organisation number 912651045

The Management Company has a branch in Sweden:

Nordea Funds Ab, Svensk filial
Mäster Samuelsgatan 21, M541
105 71 Stockholm

Maria Rengefors is responsible for the operations of the branch
Organisation number 516408-8782

Auditors of Nordea Funds Ltd and the Nordea funds registered in Finland

- PricewaterhouseCoopers Oy, Firm of Authorised Public Accountants
- principal auditor Taru Mäenpää, Authorised Public Accountant
- deputy auditor Jukka Paunonen, Authorised Public Accountant

Agents used by the Management Company

The Management Company is entitled to use external management and advisory services, such as portfolio management, accounting, IT and subscription and redemption services, in its investment fund operations.

The Management Company has outsourced the portfolio management and a part of the fund administration to Nordea Investment Management AB as well as entered into an agreement with Nordea Investment Management AB concerning the distribution of funds towards institutional customers.

The Management Company has outsourced the maintenance of the unitholder register and a part of the fund administration to Nordea Investment Funds S.A.

The Management Company has concluded an agreement with Nordea Bank Abp and Nordea Bank Abp, filial i Sverige as well as Nordea Bank Abp, filial i Norge on the distribution of funds in the Nordic countries. As distributors the banks also handle the keeping of the unitholder register for unitholders who have made subscriptions through them.

In addition, the Management Company has concluded an agreement based on which Nordea Investment Funds S.A. is the main distributor regarding the distribution in third party channels. The Management Company has also concluded distribution agreements with other co-operation partners.

Further, the Management Company has partly outsourced the maintenance of unitholder register to Evli Plc which handles the maintenance of the unitholder register of the unitholders who have made subscriptions through it.

Moreover, the Management Company has partly outsourced the maintenance of unitholder register to Swedbank AB to the extent units in the funds are subscribed through it and beneficially owned by Finnish investors.

Furthermore, the Management Company has outsourced the following functions either in full or in part to Nordea Bank Abp: bookkeeping and other financial administration of the Management Company and its branches.

About Management Company's Remuneration Policy

Nordea Funds Ltd has a comprehensive approach to compensation that recognises the importance of well-balanced, parallel remuneration structures, based on business and local market needs. It is equally important that remuneration is being consistent with and promoting sound and effective risk management not encouraging excessive risk-taking or counteracting Nordea's long-term interests or the interests of the funds managed by Nordea Funds Ltd.

The Board of Directors of the Management Company decides on the Remuneration policy.

The Nordea Funds Ltd's Remuneration Committee evaluates the remuneration policy and practices.

Information on the Remuneration Policy and Remuneration Committee of Nordea Funds Ltd is available at www.nordea.fi/funds.

Investors may receive, free of charge and upon request, the prospectus in durable medium.

Trading in fund units

Subscription and redemption orders are received in Finland on every banking day at all Nordea branches providing investment services and at Nordea Investment Management AB, Finnish branch, during their office hours. Orders can also be given with Nordea's Netbank access codes by calling Nordea Customer Service and in Nordea's Netbank on the Internet.

The Management Company may issue units before the fund receives the subscription payment if it can be ensured that the payment will be made to the fund within the time limit normally applied in the market. Different distributors may have different practises in order to ensure payment.

About trading in funds and cut-off times

The cut-off time is the time when the fund's transaction date changes. In most funds, the cut-off time is 16.30 Finnish time.

N.B. The feeder funds Nordea Conservative Yield Fund, Nordea

China Fund, Nordea European Stars Fund and Nordea India Fund are exceptions, and their cut-off time is 15.00 Finnish time.

As for fund orders of funds which are solely targeted at the Norwegian market and/or where the distributor is the Nordea branch network in Norway, the cut-off time is usually 11.00 Finnish time.

As for fund orders of funds which are solely targeted at the Swedish market and/or where the distributor is the Nordea branch network in Sweden, the cut-off time is usually 16.30 Finnish time.

Other distributors within Nordea or external distributors/ intermediaries might apply different cut-off times which may be earlier than the official cut-off time. Cut-off times can be clarified from the distributor/intermediary in question.

Nora feeder and master funds and their cut-off times

The cut-off time of the Nora feeder funds is 11.00 Finnish time in Norway and 13.00 Finnish time in Sweden and Finland. The cut-off time of the Nora master funds is 15.00 Finnish time.

ESG-enhanced feeder and master funds and their cut-off times

Fixed-income funds

The cut-off time of the feeder fund Nordea Bærekraftige Obligasjoner Global Fund (NOK) is 11.00 Finnish time in Norway and that of the feeder fund Nordea Hållbarhetsfond Obligationer Global Fund (SEK) 13.00 Finnish time in Sweden. The cut-off time of the master fund Nordea Sustainable Fixed Income Global Fund is 15.00 Finnish time.

Balanced funds

The cut-off time of the Nordea Sustainable Selection (NOK) feeder funds is 11.00 Finnish time in Norway and that of the feeder funds Nordea Sustainable Selection (SEK) 13.00 Finnish time in Sweden. The cut-off time of the Nordea Sustainable Selection master funds is 15.00 Finnish time.

Information on the cut-off times of the funds is available in the fund-specific and common fund rules.

Execution and payment of fund orders

Ordinary funds

Subscription- and redemption orders given before the cut-off time are normally executed during the same bank day. If the order is given after the cut-off time or on a day that is not a bank day, it will be executed during the next banking day.

| Cut-off time of orders | Execution (T) | Transfer of proceeds from/to account |
|------------------------|---|--------------------------------------|
| 16.30 Finnish time | Any order received before the cut-off time will be executed during the same banking day | T+2 |

Redemption/subscription proceeds will be transferred two banking days from the redemption/subscription (T+2).

Delayed funds

Some funds are so called delayed funds, where fund orders and unit valuation times differ from normal funds.

In delayed funds, Nordea Asian Stars Fund, Nordea Emerging Market Equities Fund and Nordea Japan Fund, redemption and subscription orders received before the cut-off time, will be executed during the following banking day.

| Cut-off time of orders | Execution (T) | Transfer of proceeds from/to account |
|------------------------|---|--------------------------------------|
| 16.30 Finnish time | Any order received before the cut-off time will be executed on the following banking day. | T+2 |

Redemption/subscription proceeds will be paid two banking days from the redemption/subscription (T+2).

Examples of subscriptions and redemptions

| Ordinary funds | |
|----------------|---|
| Subscription | The order is given on Friday at 16.00. The subscription is executed on Friday and the subscription amount is debited from the account on Tuesday. |
| Redemption | The order is given on Friday at 16.00. The redemption is executed on Friday and the redemption amount is credited to the account on Tuesday. |
| Delayed funds | |
| Subscription | The order is given on Friday at 16.00. The subscription is executed on Monday and the subscription amount is debited from the account on Wednesday. |
| Redemption | The order is given on Friday at 16.00. The redemption is executed on Monday and the redemption amount is credited to the account on Wednesday. |

Trading in fund units in certain funds

In certain funds, the process for execution of orders and payment of units differ from the above. The exceptional redemption and payment processes are described later in this prospectus under the header Information about the special characteristics of certain funds. An example of these funds is Nordea European Smaller Companies.

Information on subscription and redemption orders, execution of them and any exceptions from these concerning the funds are even laid down in the fund-specific rules and the common fund rules.

Exceptional situations referred to in the common fund rules**– Exceptional market circumstances**

Funds can be subject to for instance a liquidity risk, which means the risk that the fund's investments cannot be converted into cash within the planned time frame or at the desired price. This may affect the performance of the NAV per unit, if the fund's investments have to be disposed at a disadvantageous time.

A liquidity risk can occur in exceptional market conditions when, for example, certain securities are not actively traded or their buy and sell quotations differ greatly or are missing entirely. In such a case, redemption of fund units may last longer than normally, and redemptions can be suspended in certain situations.

The Management Company can temporarily suspend the redemption of units, if the market place which, according to its investment policy, can be considered the fund's main market place is closed for an unpredictable reason, or if trading in this market place has been restricted, or if disturbances occur in normal data transfer.

– Significant total amount of redemption orders

As a rule, the amount of redemption orders considered to be significant is 10% of the value of the fund. It is however possible to deviate from this 10% limit in situations where the fund receives a single redemption order or several redemption orders, the execution of which, taking into account the special characteristics of the fund, according to a normal time frame would be against the interest of those unitholders who remain in the fund.

Such a special situation refers, for instance, to a situation where exceptional market conditions prevail and where, in addition to several small orders, the fund also receives a large redemption just before the cut-off time of trading in the fund units.

– Postponement of execution date of redemptions

If the total amount of redemption orders is significant in relation to the value of the Fund, the Management Company may postpone the execution date of either all or certain redemption orders in such a way that redemption orders can be executed either in full or partially at a later stage.

The execution date of redemption orders may be postponed by a maximum of eight banking days.

– Redemption without a client order

The Management Company may redeem the fund units of a unitholder at its own initiative if there is a compelling reason arising from the unitholder's ownership in the Fund, due to which the Fund may face obligations that the Management Company cannot reasonably be expected to fulfil.

A compelling reason may arise, for example, when:

- the unitholder is placed on an international or national sanctions list and any violation of such sanctions would probably result in significant damage to the Management Company's operations or result in the Management Company violating the legislation or official regulations governing its operations;
- the unitholder does not provide the required data for knowing and identifying them;
- the unitholder's holding may cause damage to other unitholders;
- for the unitholder in question, holding fund units is against the legislation of Finland or another country or against regulations issued under such legislation;
- the unitholder moves to a country that causes significant additional reporting or an obligation for the Management Company to register or carry out other measures, which it would not otherwise have;
- the unitholder is a natural person or a legal entity or another legal arrangement that is a US person (as defined in Regulation S of the United States Securities Act of 1933).

Growth (accumulation) and distribution units

The units in a certain unit series (A, B, I, P, S, Y) can be divided into growth units (accumulation unit) and distribution units (unit classes) on the basis of the fund-dividend distribution policy. All the unit series can include both growth and distribution units.

- The income accumulated on the growth units is reinvested and increases the value of the growth units
- **For a private person, it is usually worthwhile to invest in growth units** unless annual income is needed. In the case of growth units, the potential capital gain will not be subject to capital income taxation until the fund units are redeemed. When saving regularly into funds, growth units are also a natural choice.
- **Distribution units are best suited for the investment needs of foundations and similar non-profit organisations.**

Exchange of unit class

Distribution units can be exchanged for growth units without charge and vice versa. Exchange of a unit class within the same fund is not comparable to sales of units and is not subject to taxation based on the fact that no capital gain will be generated. When switching from one fund into another fund managed by the same management company, capital gain or loss can be generated.

Fund unit register

All the Fund's units are entered in a fund unit register, and if so requested by unitholders or nominees, the transfers of fund units are registered. The holder of the fund units registered by the nominee cannot be Finnish.

Marketing funds in other countries

Fund units are not intended to be marketed or subscribed for in countries other than those in which an appropriate notification of the start of marketing of the fund has been made in accordance with the regulation governing the notification of marketing of a fund.

In Sweden, Nordea Bank Abp, filial i Sverige accepts subscriptions for fund units in SEK. Only the distributor with whom the units were originally subscribed for can receive redemption orders for fund units. In addition, subscription and redemption orders are transmitted at locations approved by the Board of Directors of the Management Company.

In Norway, subscription and redemption orders are received at a location approved by the Board of Directors of the Management Company. The fund's subscription currency is the NOK. In Denmark, subscription and redemption orders are received at a location approved by the Board of Directors of the Management Company. The fund's subscription currency is the DKK.

Depository of the Nordea funds registered in Finland

The safekeeping of an investment fund's assets is entrusted to a depository which on the basis of its primary business area is a credit institution.

The assets of an investment fund are kept separate from the assets of other investment funds, the Management Company and the depositary. The finances of the Management Company are fully separated from the assets of the fund and the fund's assets cannot be used to cover the debts of the management company or the depositary. A fund cannot go bankrupt, but depending on the market situation, the value of a fund unit can increase or decrease.

The Board of Directors of the Management Company has appointed J.P. Morgan SE – Helsinki branch, Business Identity Code 3218701-7, as depositary (the 'Depositary') in relation to the funds' assets under a depositary and custodian agreement and as amended from time to time (the 'Agreement').

J.P. Morgan SE is a credit institution on the basis of its primary business area and has the legal form of a European Company under the laws of the Federal Republic of Germany. Its registered office is on Taunustor 1, 60310 Frankfurt am Main, Germany, and the registered office of the Branch is on Pohjoisesplanadi 33, 00100 Helsinki and its domicile is in Helsinki.

The Depositary shall perform all the duties and obligations of a depositary under the relevant laws and regulations on investment funds with respect to each fund.

The Agreement is concluded for an indefinite period of time and may be terminated by the Management Company with three months' notice. Before maturity of said notice period, the Management Company shall indicate the name of a new depositary which fulfils the requirements of the laws and regulations on the investment funds and alternative investment funds, and to which the assets shall be transferred, and which shall take over its duties as the funds' depositary from the Depositary. Until the replacement is appointed, the Depositary shall continue to perform the services under the Agreement and as required by a custodian or depositary pursuant to applicable law.

The Depositary will be responsible for the safekeeping and ownership verification of the assets of the funds, cash flow monitoring and oversight in accordance with the relevant laws and regulations on investment funds and alternative investment funds. In carrying out its role as depositary, the Depositary shall act independently from the investment funds and the Management Company and solely in the interest of the fund and the funds' unitholders.

In accordance with the provisions of the Agreement and the relevant laws and regulations on investment funds and alternative investment funds, the Depositary may, subject to certain conditions and in order to effectively conduct its duties, delegate part or all of its safe-keeping duties to one or more third party delegates, including sub-custodians, appointed by the Depositary from time to time. Such delegated duties may only include custody and ownership verification in accordance with the relevant laws and regulations on investment funds and alternative investment funds.

When selecting and appointing a delegate, the Depositary shall exercise all due skill, care and diligence as required by the relevant laws and regulations on investment funds and alternative investment funds to ensure that it entrusts the Management Company's assets only to a delegate who may provide an adequate standard of protection. The Depositary's liability will not be affected by the fact that it has entrusted to a third party some or all of the assets in its safekeeping.

As part of the normal course of global custody business, the Depositary may from time to time enter into arrangements with other clients, funds or other third parties for the provision of safekeeping and related services.

Conflicts may arise from time to time between the Depositary and its safekeeping delegates, for example, where an appointed delegate is an affiliated group company and is providing a product or service to a fund and has a financial or business interest in such product or service or where an appointed delegate is an affiliated group company which receives remuneration for other related custodial products or services it provides to the funds e.g. foreign exchange, securities lending, pricing or valuation services. In the event of any potential conflict of interest which may arise during the normal course of

business, the Depositary will at all times have regard to its obligations under applicable laws.

Up-to-date information will be made available to investors on request from the Management Company, namely information regarding the identity of the Depositary, a description of its duties and of conflicts of interests that may arise, a description of any safekeeping functions delegated by the Depositary, the list of delegates and sub-delegates.

The compensation for safekeeping and other related services paid by the Management Company to the Depositary consists in all the UCITS and non-UCITS funds registered in Finland of a safe custody fee, a depositary fee and a transaction fee. The safe custody/depositary fee is a certain percentage of the market value of the securities in custody or their underlying assets. These fees vary by country. The transaction fees are based on the number and type of transactions.

The Depositary will have no discretion in the decision-making process relating to the fund's investments. The Depositary is a service provider to the Management Company and is not responsible for the preparation of this document and therefore accepts no responsibility for the accuracy of any information contained in this document.

Overall objective of the Nordea funds' ownership policy

The Nordea funds have issued their corporate governance guidelines in 2001. The guidelines specify what the Management Company expects from the companies in which the assets of the funds managed by the Management Company are invested in.

Nordea Funds Ltd is convinced that companies' focus on corporate governance issues will have a positive impact on their share price performance and provide added value both to the company shareholders and the unitholders of the funds.

In their corporate governance guidelines, the Nordea funds emphasise that communication between a company and its shareholders should be transparent. The principles of openness and clarity also apply to the composition of the Board of Directors.

An important element in the funds' ownership responsibility is to promote good corporate governance in the companies the funds invest in and to see to the joint interests of the unitholders. The aim is to improve the return on the fund investment and to contribute to the functionality and reliability of capital markets.

Information about corporate governance activities and [Nordea Funds Ltd's ownership policy](#) (the attachment is in English) is available to unitholders/investors on [Nordea funds' web pages](#) and on the web pages of the branches.

Risks relating to fund investment

All investments involve risk. The risk descriptions below cover the main risk factors related to the funds. A fund could potentially be affected by risks beyond those described here, nor are these risk descriptions themselves intended to be exhaustive. Each risk is described as if for an individual fund.

Any of these risks could cause a fund to lose money, to perform less well than similar investments or a benchmark, to experience high volatility (ups and downs in NAV per unit), or to fail to meet its objective over any period of time.

Concentration risk

To the extent that the fund invests a large portion of its assets in a limited number of industries, sectors, or issuers, or within a limited geographical area, it can be more risky than a fund that invests more broadly.

Focusing on any company, industry, sector, country, region, type of stock, type of economy, etc. makes the fund more sensitive to the factors that determine market value for the area of focus. These factors may include economic, financial or market conditions as well as social, political, environmental or other conditions. The result can be both higher volatility and a greater risk of loss.

Counterparty risk

Any entity with which the fund does business could become unwilling or unable to meet its obligations to the fund.

If a counterparty becomes bankrupt, the fund could lose some or all of its money and could experience delays in getting back securities or cash that were in the possession of the counterparty. This could mean the fund is unable to sell the securities or receive the income from them during the period in which it seeks to enforce its rights, a process that itself is likely to create additional costs. In addition, the value of the securities could fall during the period of delay.

Agreements with counterparties can be affected by liquidity risk (how the investment can be converted into cash) and operational risk (including the risk of human error and criminal activity), either of which could cause losses or limit the fund's ability to meet redemption requests.

Because counterparties are not liable for losses caused by a "force majeure" event (such as a serious natural or human-caused disaster, riot, terrorist act or war), such an event could cause significant losses for which the fund would likely have no recourse.

Credit risk

A bond or money market security, whether from a public or private issuer, could lose value if the issuer's financial health deteriorates. This risk is greater the lower the credit quality of the debt, and the greater the fund's exposure to below investment grade bonds.

Certain high yield bonds rated Ba1 or BB+ and below by some Rating Agencies are very speculative, involve comparatively greater risks than higher quality securities, including price volatility, and may be questionable as to principal and interest payments. Compared to higher-rated securities, lower rated high yield bonds generally tend to be more affected by economic and legislative developments, changes in the financial condition of their issuers, have a higher incidence of default and be less liquid.

Certain funds may also invest in high yield bonds placed by emerging market issuers that may be subject to greater social, economic and political uncertainties.

In extreme cases, a debt security could go into default, meaning the issuers or guarantors of certain bonds could become unable to make payments on their bonds.

If the financial health of the issuer of a bond or money market security weakens, or if the market believes it may weaken, the value of the bond or money market security may fall or become more volatile (fluctuation in the value increases), and it may become illiquid.

Below investment grade bonds are considered speculative. Compared to investment grade bonds, the prices and yields of below investment grade bonds are more sensitive to economic events and more volatile, and the bonds are less liquid.

Debt issued by governments and government-owned or -controlled entities can be subject to many risks, especially in cases where the government is reliant on payments or extensions of credit from external sources, is unable to institute the necessary systemic reforms or control domestic sentiment, or is unusually vulnerable to changes in geopolitical or economic sentiment. Even if a government issuer is financially able to pay off its debt, investors may have little recourse should it decide to delay, discount or cancel its obligations. Debt issued by corporations is usually less liquid than debt issued by government or supranational entities.

Bonds that are in default may become illiquid or worthless. Trying to recover principal or interest payments from a defaulted issuer can be difficult, particularly if the bonds are unsecured or subordinate to other obligations, and can involve additional costs.

Currency risk

To the extent that the fund holds assets that are denominated in currencies other than the base currency, any changes in currency exchange rates could reduce investment gains or income, or increase investment losses, in some cases significantly.

Exchange rates can change rapidly and unpredictably, and it may be difficult for the fund to unwind its exposure to a given currency in time to avoid losses. Changes in exchange rates can be influenced by such factors as export-import balances, economic and political trends, governmental intervention and investor speculation.

Intervention by a central bank, such as aggressive buying or selling of currencies, changes in interest rates, restrictions on capital movements or a "de-pegging" of one currency to another, could cause abrupt or long-term changes in relative currency values.

Custody risk

The depositary, and any entity to whom custody of fund assets is further delegated, are all considered counterparties and are subject to counterparty risk. In addition, because cash deposits are not segregated at the depositary or sub-custodian level, these assets would be at greater risk in the event of a bankruptcy or other failure of any of these parties.

Derivatives risk

Small movements in the value of an underlying asset can create large changes in the value of a derivative, making derivatives highly volatile in general, and exposing the fund to potential losses significantly greater than the cost of the derivative.

Derivatives are subject to the risks of the underlying asset(s) as well as carrying their own risks. Some of the main risks of derivatives are:

- the pricing and volatility of some derivatives, in particular credit default swaps (CDS), may diverge from the pricing or volatility of their underlying reference(s)
- in difficult market conditions, it may be impossible or unfeasible to place orders that would limit or offset the market exposure or financial losses created by some derivatives
- using derivatives involves costs that the fund would not otherwise incur
- changes in tax, accounting, or securities laws could cause the value of a derivative to fall or could force the fund to terminate a derivative position under disadvantageous circumstances
- any hedging measures that the fund takes with derivatives that are designed to offset specific risks may work imperfectly, and they may not be feasible at all times.

Exchange-traded derivatives Trading in these derivatives or their underlying assets could be suspended or subject to limits. There is also a risk that settlement of these derivatives through a transfer system may not happen when or as expected.

OTC derivatives — non-cleared Because OTC derivatives are in essence private agreements between a fund and one or more counterparties, they are less highly regulated than market-traded securities. They also carry greater counterparty and liquidity risks. If a counterparty ceases to offer a derivative that a fund had been planning on using, the fund may not be able to find a comparable derivative elsewhere and may miss an opportunity for gain or find itself unexpectedly exposed to risks or losses, including losses from a derivative position for which it was unable to buy an offsetting derivative.

OTC derivatives — cleared Because these derivatives are cleared on a trading platform, their liquidity risks are similar to those for exchange-traded derivatives. However, they still carry counterparty risk that is similar to non-cleared OTC derivatives.

Emerging and frontier markets risk

Emerging and frontier markets are less established, and more volatile, than developed markets. They involve higher risks, particularly market, credit, legal and currency risks, and are more likely to experience risks that, in developed markets, are associated with unusual market conditions, such as liquidity and counterparty risks.

Reasons for this higher level of risk include:

- political, economic, or social instability
- economies that are heavily reliant on particular industries, commodities, or trading partners
- high or capricious tariffs or other forms of protectionism
- quotas, regulations, laws, restrictions on repatriation of monies, or other practices that place outside investors (such as the fund) at a disadvantage
- changes in laws or failure to enforce laws or regulations, to provide fair or functioning mechanisms for resolving disputes or pursuing recourse, or to otherwise recognise the rights of investors as understood in developed markets
- excessive fees, trading costs, taxation, or outright seizure of assets
- inadequate reserves to cover issuer or counterparty defaults
- incomplete, misleading, or inaccurate information about securities and their issuers
- non-standard or sub-standard accounting, auditing or financial reporting practices
- markets that are small and have low trading volumes, and consequently can be vulnerable to liquidity risk and to manipulation of market prices
- arbitrary delays and market closures
- less developed market infrastructure that is unable to handle peak trading volumes
- fraud, corruption and error
- increased sustainability risk

In certain countries, securities markets may also suffer from impaired efficiency and liquidity, which may worsen price volatility and market disruptions. To the extent that emerging markets are in different time zones, and may have different trading days, these risks could be compounded for the fund if it is not able to react in a timely fashion to price movements that occur when the fund is not open for business.

For purposes of risk, the category of emerging markets includes markets that are less developed, such as most countries in Asia, Africa, Latin America and Eastern Europe, as well as countries such as China and India that have successful economies but may not offer the highest levels of investor protection. Frontier markets are the least developed of the emerging market countries. The list of emerging and less developed markets is subject to continuous change.

Equity risk

Equities can lose value rapidly, and typically involve higher (often significantly higher) market risks than bonds or money market instruments.

If a company goes through bankruptcy or a similar financial restructuring, its equities may lose most or all of their value.

Initial public offerings (IPOs) can be highly volatile and can be hard to evaluate because of a lack of trading history and relative lack of public information.

Event risk

Unpredictable events for which the contracting parties are not liable and which cause unpredictable and insurmountable consequences that are independent of agreements and cause a risk of the discontinuation of operations are called force majeure events. For instance, severe natural catastrophes, uprisings, strikes and states of war can be considered force majeure events.

The realisation of force majeure risks may have a significant effect, for example, on the prices of the securities in the fund's portfolio or on the fund's possibility to engage in securities trade. Consequently, the realisation of force majeure risks may impact the execution schedule of fund redemptions.

Interest-rate risk

When interest rates rise, bond values generally fall. This risk is generally greater the longer the maturity or duration of the bond investment.

Leverage risk

The fund's high net exposure to certain investments could make its share price more volatile.

To the extent that the fund uses leverage to increase its net exposure to any market, rate, basket of securities or other financial reference source, fluctuations in the price of the reference source will be amplified at the fund level.

Liquidity risk

Certain securities may be hard to value or to buy or sell at a desired time and price, especially in larger quantity. In addition, temporary market conditions could cause any security to become hard to value or to sell at a desired time and price.

Trading in particular securities or other instruments may be suspended or restricted by the relevant exchange or by a governmental or supervisory authority and a fund may incur loss as a result. An inability to sell a portfolio position can adversely affect those funds' value or prevent those funds from being able to take advantage of other investment opportunities.

Liquidity risk could affect the fund's value and its ability to pay redemption proceeds or to repay, for example, buy-sell back agreement proceeds by the agreed deadline, because of unusual market conditions, an unusually high volume of redemption requests, or other uncontrollable factors. To meet redemption requests, those funds may be forced to sell investments at unfavourable times and/or conditions.

Securities that are inherently less liquid than, for example, large equities that trade daily on major exchanges, may include securities of any type that represent a small issue, are traded infrequently, or are traded on markets that are comparatively small or have long settlement times.

Investment in debt securities, small and mid-capitalisation stocks and emerging market issuers will be especially subject to the risk that during certain periods, the liquidity of particular issuers or industries, or all securities within a particular investment category, will shrink or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse investor perceptions, whether or not accurate.

Market risk

Prices and yields of many securities can change frequently – sometimes with significant volatility – and can fall, based on a wide variety of factors.

Examples of these factors include:

- political and economic news
- government policy
- changes in technology and business practices
- changes in demographics, cultures and populations
- natural or human-caused disasters (including but not limited to pandemics), whether they qualify as force majeure or not
- cybercrime, fraud and other criminal activities
- weather and climate patterns
- scientific or investigative discoveries
- costs and availability of energy, commodities and natural resources

The effects of market risk can be immediate or gradual, short-term or long-term, narrow or broad.

Operational risk

The fund could be subject to the risk of loss resulting from human error or criminal activity such as cybercrime and fraud, faulty processes or governance, or technological failures.

Operational risks may subject the fund to errors affecting valuation, pricing, accounting, tax reporting, financial reporting, custody and trading, among other things. Operational risks may go undetected for long periods of time, and even if they are detected it may prove impractical to recover prompt or adequate compensation from those responsible.

Sustainability risk

A sustainability risk means an environmental, social or governance (ESG) event, or condition that, if it occurs, could cause a negative material impact on the value of the investment.

Sustainability risk may significantly increase the volatility of the investment return of the fund.

Examples of sustainability risks include:

- Climate-related risk: the financial risks posed by the exposure to issuers that potentially contribute to or are affected by climate change. This includes not only the physical climate risk, for example, severe weather conditions due to climate change that may impact an investee company and increase the risk related to certain countries, but also the climate-transition risk which refers to changes in policy measures, technology or consumer behaviour that can have a negative effect on a company.
- Social risk: the risks of any negative financial impact on the issuer stemming from the current and/or prospective impacts of social factors, such as inequality and poor labour relations.
- Governance risk: the risks of any negative financial impact on the issuer stemming from the current and/or prospective impacts of governance factors, such as bribery and corruption.

Sustainability risks are included in the investment decision process as part of the overall risk assessment and are considered together with traditional investment risks (for example market, credit or liquidity risk). Sustainability risks may have a significant impact on traditional investment risks and be a factor that contributes to the materiality of these risks.

Portfolio managers and analysts have access to relevant ESG information, making it possible to identify sustainability risks within the investable universe. The ESG data from external data vendors is supplemented by NAM's* internal proprietary ESG tools that are developed for use in selected investment teams and in NAM's Responsible Investments team.

*NAM refers to Nordea Investment Management AB.

These tools, which include a NAM's proprietary ESG data platform, are aimed at promoting the understanding and assessment of sustainability risks, possessed by NAM's portfolio managers.

To support the integration of sustainability risks in the investment decisions made within NAM's investment teams, NAM's Risk & Performance Analysis team integrates, if applicable, an ESG analysis in the team's risk reporting that is made available to analysts and portfolio managers on a daily basis.

Additional expertise in the sustainability-risk domain may be provided by analysts within NAM's Responsible Investment team which supports NAM's analysts and portfolio managers who are ultimately responsible for the investment decision process.

The Risk Management Function of the management company, Nordea Funds Ltd, which is independent from NAM's investment organisation, performs risk oversight, monitoring and escalation based on established policies.

Examples of sustainability risks and how sustainability risks are integrated in the investment decision process can be found in the statement on sustainability risk integration in the investment decision-making process available at www.nordeafunds.com.

Risks relating to dealing in Chinese securities

The legal rights of investors in China are uncertain, government intervention is common and unpredictable, and some of the major trading and custody systems are unproven.

In China, it is uncertain whether a court would protect the fund's right to securities it may purchase, whether purchased via a local broker under a Qualified Foreign Institutional Investor (QFII) Licence, the Stock Connect program or other methods. The structure of these schemes does not require full accountability of some of its component entities and leaves investors such as the fund with relatively little standing to take legal action in China. The regulations of these schemes may be subject to change.

In addition, Chinese securities exchanges or authorities may tax or limit short-swing profits, recall eligible stocks, set or change maximum trading volumes, either at the investor level or at the market level) or

otherwise block, limit, restrict or delay trading, hampering or preventing a fund from implementing its intended strategies.

Stock Connect program

The Shanghai- or Shenzhen-Hong Kong Stock Connect programs (Stock Connect) are joint projects of the Hong Kong Exchanges and Clearing Limited (HKEX), China Securities Depository and Clearing Corporation Limited (ChinaClear), and the Shanghai and the Shenzhen Stock Exchanges. Hong Kong Securities Clearing Company Limited (HKSCC), a clearing house that in turn is operated by HKEX, acts as nominee for investors accessing Stock Connect Securities.

Creditors of the nominee or custodian could assert that the assets in accounts held for the funds are actually assets of the nominee or custodian. If a court should uphold this assertion, creditors of the nominee or custodian could seek payment from the assets of the relevant fund. HKSCC, as nominee, does not guarantee the title to Stock Connect securities held through it and is under no obligation to enforce title or other rights associated with ownership on behalf of beneficial owners (such as the funds). Consequently, title to such securities, or the rights associated with them (such as participation in corporate actions or shareholder meetings), cannot be assured.

Should any fund suffer losses resulting from the performance or insolvency of HKSCC, the Management Company would have no direct legal recourse against HKSCC, because Chinese law does not recognize any direct legal relationship between HKSCC and either the Management Company or the depository. Should ChinaClear default, HKSCC's contractual liabilities will be limited to assisting participants with claims. A fund's attempts to recover lost assets could involve considerable delays and expenses, and may not be successful.

China Interbank Bond Market (CIBM)

China prohibits outside lenders from extending credit directly to individuals or entities within China. Foreign investors (such as the fund) can buy Chinese corporate and government bonds. Because these bonds are denominated in RMB, whose value and liquidity is to some extent controlled by the government, currency risks may affect the liquidity and trading price of Chinese bonds. Many of the same concerns about investor rights apply to Chinese bonds as well.

Bond Connect

Bond Connect aims to enhance the efficiency and flexibility of investing in the China Interbank Bond Market. Although Bond Connect removes CIBM's investment quota and the need for a bond settlement agent, investments made through Bond Connect may be subject to high price volatility and potential lack of liquidity due to low trading volume of certain debt securities. Large spreads between bid and offer prices, which make it harder to sell bonds at a profit, are also a risk, as is counterparty risk.

Currencies

In China, the government maintains two separate currencies: onshore renminbi (which must remain within China and generally cannot be owned by foreigners) and offshore renminbi (which can be owned by anyone). The exchange rate, and the extent to which the currencies can be exchanged, is determined by a combination of market and government actions. This effectively creates currency risk within a single nation's currency, as well as liquidity risk.

Methods used to calculate the global exposure

– Methods for UCITS funds

In order to control the market risk within the fund, each fund shall calculate its global exposure. As for UCITS funds, meaning funds that comply with the EU UCITS Directive, Nordea Funds Ltd shall choose, as further described in applicable regulations, one of the following methods to measure the market risk components of such global exposure:

– The commitment approach

The positions on derivatives are converted into equivalent positions in underlying assets, after consideration of all netting and hedging arrangements. The total exposure to markets deriving from derivatives may not exceed 100% of the Net Asset Value of the fund. This

means that the total market exposure of the fund may not exceed 200% of the Net Asset Value of the fund. **All funds that are not mentioned in the below VaR tables, use the commitment approach.**

– The Value-at-Risk (VaR) method

Depending on the investment policy of the fund, a more advanced risk measurement methodology, Value-at-Risk (VaR), can be used instead of the commitment approach, to calculate the global exposure of the fund. The VaR approach is a measure of the maximum potential loss due to market risk, given confidence level (probability) over a specific time period, rather than leverage. Further either a relative or an absolute VaR methodology can be used. The VaR is measured at the whole fund level, and is validated through back as well as stress tests, in order to ensure the relevance of the model.

The funds below applying **the relative VaR** method to measure their global exposure compare their VaR with the one of their designated reference portfolios. VaR is calculated on a time horizon of 1 month (20 business days) and a confidence level not below 95%, and shall not exceed 2 times the VaR of the reference portfolio.

| Name of fund | Reference portfolio | Expected level of leverage (in % of NAV) as sum of notional values |
|--|---|--|
| Nordea Private Banking Obligasjon Fund (*) | NBP Norwegian Regular Market Index, group 1, 2 and 3, fixed-rate securities, 3-year duration target (NORM123D3) | 80 |

*) The fund applied the commitment approach method to measure its global exposure until 9.5.2022.

The funds below applying the methodology called **the absolute VaR** measure their global exposure by calculating a VaR figure for the fund, based on a time horizon of 1 month (20 business days) and a confidence level not below 95%. The monthly VaR with a confidence level of 99% shall not exceed 20% of the Net Asset Value of the relevant fund. If different confidence levels are applied within the calculations the maximum limit of 20% must be adjusted accordingly.

| Name of fund | Expected level of leverage (in % of NAV) as sum of notional values |
|---|--|
| Nordea Allokeringfond Fund | 200 |
| Nordea Discretionary Asset Allocation Fund | 200 |
| Nordea Conservative Yield Fund (*) | 180 (concerns the master fund as well) |
| Nordea Fixed Income Credit Opportunities Fund | 80 |
| Nordea Kreditt Stars Fund | 160 |
| Nordea Obligasjon Stars Fund | 600 |
| Nordea Tactical Asset Allocation Fund | 200 |
| Nordea Yield Fund | 100 |

*) Nordea Conservative Yield Fund is a feeder fund, and Nordea 1 – Conservative Fixed Income Fund is the master fund which also uses the Absolute VaR method to calculate the fund's global exposure.

Since the VaR approach does not directly limit the level of leverage in the fund, the expected level of leverage over time is presented above. The expected level of leverage shall be a fair indication of the actual level of leverage over time. The actual daily level of leverage may deviate (ie. be higher or lower) from such expected level depending on the strategies applied by the portfolio manager and the available investment opportunities. The expected level of leverage is not a regulatory limit and should be used for indicative purposes only. The method selected for leverage computation is based on the sum of notional, a measure of aggregated derivative usage.

The annual report will provide the actual level of leverage over the past period and additional explanations on this figure.

– Methods for alternative funds (AIF's)

As required by AIFM Regulation, the global exposure of alternative funds shall be calculated in accordance with commitment method and gross method, where all positions that potentially have market risk (derivatives, cash and securities) are taken into consideration. The maximum level of leverage applied to each fund is presented below. *Information on the total amount of leverage employed by the AIF shall be disclosed in the annual report.*

| Name of AIF fund | Maximum level of leverage (in % of NAV), gross method* | Maximum level of leverage (in % of NAV), commitment approach (*) |
|---|--|--|
| Nordea Navigo | 300 | 200 |
| Nordea Private Banking Norsk Aksje Portefolje | 300 | 200 |

*) The basis for calculation in situation where there is no leverage is 100%. There have been no changes to the maximum level of leverage.

No rights of re-use of collateral or any guarantee under the leveraging arrangements has been granted.

Credit ratings of funds' investments

The investment decisions of funds are not made solely on the basis of internationally approved credit ratings issued by external credit rating agencies. The assets of funds may also be invested in financial instruments which do not have the credit ratings mentioned below on the basis of the Management Company's internal assessment.

Certain funds may also invest in fixed-income instruments without a credit rating.

Further information on the fund-specific restrictions on credit ratings is presented in the fund rules.

Benchmark indices used by funds

The benchmark index is an index or indexed reference value to which the return of an investment fund is compared. The objective of the fund is usually to seek to provide investors with investment growth in the long term. The chosen benchmark index should reflect the fund's investment universe and investment restrictions as well as possible. The index should include both the performance of the investments and their dividends or coupon yields. The activity of the fund's investment operations determines how much the return of the fund differs from the return of the benchmark index.

The equity index components of the composite indices are either NTR indices which include the dividends after taxes or GTR indices which include dividends.

All funds do not necessarily have a benchmark, and their investment objective is otherwise defined. The grounds for not selecting a benchmark or the reason why it is not sensible to use a benchmark are presented on a fund-specific level in the table below.

Unless mentioned specifically in the table below then the benchmark in a fund is used for performance comparison only. Furthermore, the risk characteristics of the fund's portfolio may bear some resemblance to those of the benchmark.

- The following text is included in the table below for certain funds, for instance, with a 1-month Euribor rate used as the benchmark:
 - The benchmark will be used for performance comparison only. The fund's portfolio is actively managed without reference or constraints relative to its benchmark.

There are certain funds that have taken in use several benchmarks, even for other than performance comparison purpose:

- The following features are mentioned in the table below:
 - The benchmark is to be used for risk comparison only. In this case, the risk characteristics of the fund's portfolio will bear some resemblance to those of the benchmarks.

Information about previous benchmarks used by the funds is available in the annual and semi-annual reports.

– Benchmark indices included in ESMA's register

*The administrator (the entity that has control over the benchmark) of this benchmark is included in ESMA's public register of administrators pursuant to art. 36 of the EU-parliament's and the Council's Regulation (2016/1011) on indices used as benchmarks, etc.

In the valid prospectus, the administrators marked with the asterisk in the table below are registered administrators with ESMA.

EU regulations stipulate that EU-based benchmark administrators have to be approved by and registered with ESMA. Third-country administrators must be approved and registered by 31.12.2025, at the latest. Those benchmarks with no asterisk shown below are either provided by administrators that have not yet been registered with ESMA, or the benchmark is not used in such a manner as referred to in the Regulation.

The Management Company has an action plan that will be taken if the index of the fund ceases to be provided or if material changes are made in the index. Further, if the administrator of an index will not be registered with ESMA within the prescribed time, or if the administrator's status changes materially, the Management Company will update the prospectus accordingly and in addition to this, amend the rules of certain funds when necessary.

An interest-rate-based benchmark index can be used as part of the composite index in certain funds or as the sole benchmark index in a fund. Interest-rate-based benchmark returns are derived by using a total return index based on the daily quoted interest rate (e.g. Euribor, Nibor or Stibor). Source: Refinitiv.

Responsible investment

The SFDR appendices available at the end of this prospectus include sustainability-related information

Nordea pays special attention to social, governance and environmental issues in many of its products and services, including investment funds. Nordea's funds have applied the Responsible Investment Policy (RI) in all Nordic countries since 2007. The fund companies in the Nordea Group have signed the United Nations Principles for responsible investment (UNPRI). Issues related to environmental and social responsibility and corporate governance have thus been integrated in the funds' investment operations.

Nordea is one of the first large Nordic banks to engage itself in the process of dealing with the ethical issues related to the companies' business practices.

In general, Nordea's funds do not invest in companies manufacturing armaments against international agreements, such as anti-

personnel mines and cluster munitions. Similarly, investments are not made in companies that manufacture nuclear weapons or develop nuclear weapon programmes.

More information about [responsible investment](#) (partly in English) is presented at the website www.nordea.com. [The Responsible Investment Policy](#) (the attachment is in English) is available at the website www.nordeafunds.com/downloads.

About funds' transaction costs

The transaction costs of the Nordea funds over the past 12 months are reported in the annual and semi-annual report. This key figure shows how the commission expenses and brokerage fees related to the fund's trading and paid to the securities brokers effect on the fund's Net Asset Value on a yearly basis. Transaction costs are reported as a percentage of the fund's maximum market value over the review period (past 12 months).

Both internal and external investment research is used to add value and to promote efficient portfolio management in the funds. Costs related to research material are not charged from the funds' assets.

About fund of funds and their investments in underlying funds

On a general level, the underlying funds can be fixed-income, balanced or equity funds or other funds such as hedge funds. The underlying funds may have different investment strategies and/or restrictions compared with the fund of funds. In addition to this, regarding other characteristics possessed by the underlying fund, there might be differences, such as in use of derivatives, level of leverage, method used to calculate the global exposure, sensitivity to interest-rate movements, credit exposure, asset allocation, regional breakdown etc.

In certain funds of funds there might be a restriction on the maximum proportion for e.g. hedge funds having different investment strategies and/or restrictions.

Information about the special characteristics of certain funds

Efficient Portfolio Management Techniques and Transparency of Securities Financing Transactions

General information

For the purpose of efficient portfolio management, the funds included in this prospectus may use buy-sell back transactions, repurchase agreement transactions and total return swaps. Efficient portfolio management is used for the purpose of generating an excess return on a fund or reducing costs or risk within a fund.

– Securities lending arrangements

When a fund enters into a securities lending arrangement, it is the act of lending securities to a borrower in exchange of a fee.

The Nordea funds do no longer use securities lending/borrowing although it is possible according to the fund rules.

– Buy-sell back transactions, repurchase agreement transactions and total return swaps

Buy-sell back transactions

Buy-sell back transactions consist of transactions which are not governed by a repurchase agreement or a reverse repurchase agreement and where an entity buys or sells securities or instruments to or from a counterparty, and agrees, respectively, to sell to or buy back from that counterparty securities or instruments of the same description at a specified price on a future date. Such transactions are commonly referred to as buy-sell back transactions for the entity buying the securities or instruments and sell-buy back transactions for the counterparty selling them.

Repurchase agreements

Repurchase agreements consist of transactions governed by an agreement in which an entity sells securities or instruments to a counterparty, subject to a commitment to repurchase them, or substituted securities or instruments of the same description, from the counterparty at a specified price on a future date already specified, or to be specified by the transferor. Such transactions are commonly referred to as repurchase agreements for the entity selling the securities or instruments, and reverse repurchase agreements for the counterparty buying them.

Total return swaps

A total return swap (TRS) is an agreement in which one entity (total return payer) transfers the total economic performance of a reference asset to another entity (total return receiver). Total economic performance includes interest income, fees, gains or losses from market movements, and credit losses. In addition to total return swaps the funds' investments targets can also be other instruments with characteristics similar to the TRSs, such as contracts for difference (CFD).

In the selection of a counterparty a credit risk assessment and a due diligence will have to be performed, including a review of terms and conditions, and of the execution policy to secure compliance with the general market standard. All approved counterparties are subject to a regular review.

Collateral is typically received to reduce risk. The fund does only accept cash as collateral, the safekeeping of which will be entrusted to the depositary of the fund. The fund does not reuse collateral.

– Risks and potential conflicts of interest

There is no assurance that a fund will achieve the objective for which it entered into a specific transaction. The risks related to these transactions can have a negative impact on the return of the fund.

Lending securities to borrowers constitutes a risk that a borrower defaults and is not able to return borrowed securities. In order to mitigate this risk, the securities lending agent to the fund is obliged to ensure that the retrieval of any borrowed securities is carried out in accordance with the normal market practice and when doing so to the best of securities lending agent's ability.

Repurchase agreement transactions might expose a fund to risks similar to those associated with other types of derivatives. If a counterparty of the repurchase agreement transactions defaults, a loss may be realised on the sale of the underlying security to the extent that the proceeds from the sale and accrued interest of the security are less than the resale price, including interest, set forth in the repurchase agreement transactions. Moreover, should a counterparty declare bankruptcy or become insolvent, a fund may incur delays and costs in selling the underlying security, or it may suffer a loss of principal and interest.

During the life of a repurchase agreement contract, the fund is not entitled to sell the securities which are the object of the contract, either before the right to repurchase these securities has been exercised by the counterparty, or the repurchase term has expired.

Counterparty risk is generally mitigated by the transfer or pledge of collateral in favour of the fund. However, there are certain risks associated with collateral management, including difficulties in selling

collateral and/or losses incurred upon realisation of collateral, as described below.

Securities lending transactions and repurchase agreement transactions also entail liquidity risks resulting from, inter alia, locking cash or securities positions in transactions of excessive size or duration relative to the liquidity profile of the fund or delays in recovering cash or securities paid to the counterparty. These circumstances may delay or restrict the ability of the fund to meet redemption requests. The fund may also incur operational risks such as, inter alia, non-settlement or delay in settlement of instructions, failure or delays in satisfying delivery obligations under sales of securities, and legal risks related to the documentation used in connection of such transactions.

The risks of such securities lending arrangements as well as buy-sell back transactions, repurchase agreement transactions and total return swaps are sufficiently captured by the risk management process of the fund.

Conflict of interests is handled by the Management company's/ Fund's policy on conflict of interests.

– Sharing of return as well as costs and fees

The fund will get the income derived from buy-sell back transactions, repurchase agreement transactions and total return swaps deducted with the direct and indirect operational costs. Direct and indirect operational costs may vary depending on the type of the transaction and the counterparty. Particularly, a fund may pay fixed or variable fees that might be a percentage of the generated income to agents and other intermediaries, which may be affiliated with the depository, the investment management organisation or the Management Company, in consideration of the functions they perform and risks they assume.

Information on direct and indirect operational costs and fees incurred by each fund in this respect, as well as the identity of the entities to which such costs and fees are paid, if applicable, is available in the fund's annual and semi-annual report.

– Investment vehicles and utilisation rates

- Securities lending: A fund is entitled to use securities lending to a maximum of 25 % of the fund's securities portfolio according to fund rules. However, the funds do not use securities lending in their investment activities meaning that the expected use is 0 %.
- Buy-sell back/sell-buy back transactions and repurchase agreements: A fund is entitled to use buy-sell back transactions and repurchase agreement transactions to a maximum of 10 % of the fund's NAV. However, the expected use is 0 %.
- Total return swaps are not used, meaning that the expected use is 0 %.

Swing pricing method

Subscriptions for and redemptions of fund units entail trading costs since the portfolio manager has to buy new securities for the fund in order to invest the assets gathered from subscriptions, or to sell securities in order to get liquid assets to pay for redemptions. The costs resulting from buying or selling securities are shared by all the fund's unitholders.

Using the swing pricing method, the above-mentioned costs can be allocated to the unitholders making the subscriptions or redemptions, in other words those unitholders who cause the need to trade in securities. Thus, the aim of the method is to promote the equal treatment of all unitholders.

Principles of the swing pricing method

Under the swing pricing method, the net asset value (NAV) per unit is adjusted using a *swing factor*.

- If the fund experiences net inflows, the NAV is adjusted upwards using the swing factor, which means that the NAV per unit increases.
- If the fund experiences net outflows, the NAV is adjusted downwards using the swing factor, which means that the NAV per unit decreases.

The benefit from the adjustment of the NAV per unit using the swing factor always goes to the fund, and thus its existing unitholders.

Use of swing pricing in equity funds

In equity funds, the NAV per unit is adjusted on every NAV calculation date on which the fund experiences net inflows or net outflows. This is referred to as the full swing pricing method.

- If the fund experiences net inflows, the NAV per unit is adjusted upwards using the swing factor, which means that the NAV per unit increases.
- If the fund experiences net outflows, the NAV per unit is adjusted downwards using the swing factor, which means that the NAV per unit decreases.

Use of swing pricing in fixed-income funds

In fixed-income funds, the NAV per unit is adjusted on the valuation dates on which the fund's net inflows or net outflows exceed a pre-determined threshold. This is referred to as the partial swing pricing method. In net inflows, the NAV per unit is adjusted upwards using the swing factor (the NAV per unit increases) and in net outflows the NAV per unit is adjusted downwards using the swing factor (the NAV per unit decreases).

More information about the swing pricing method can be found in the fund-specific rules and in the key information document. Fund-specific information on the actual use of the swing factor is presented in the Nordea funds' annual report and semi-annual report.

Terminology related to the swing pricing method:

Net inflows: The volume of subscriptions made in a fund during one NAV calculation day is greater than the volume of redemptions.

Net outflows: The volume of redemptions made in a fund during one NAV calculation day is greater than the volume of subscriptions.

Swing factor: A pre-determined percentage used to adjust the NAV per unit.

Threshold: A pre-determined threshold (percentage of the NAV of the fund) that must be exceeded before the NAV per unit is adjusted using the swing factor.

Full swing pricing: The NAV per unit is adjusted on every NAV calculation date on which there are net inflows or net outflows in the fund.

Partial swing pricing: the NAV per unit is adjusted if a fund's net inflows or net outflows exceed a pre-determined threshold.

| Full swing pricing is in use in the following funds | |

Duration hedging

Duration-hedged unit series are available for selected funds. Currently duration-hedged unit series is available in the funds listed below. Duration-hedged unit series is denoted with "ID" which refers to the duration-hedged I unit series designed for institutional investors.

Nordea Corporate Bond Fund ID

A unit series using duration hedging typically aims at maintaining the duration at a target level. The duration hedging may be monitored and adjusted daily as necessary. The hedge construction and adjustments are performed by trading fixed-income derivatives.

Currency hedging

Currently, there are no currency-hedged unit series in the funds managed by Nordea Funds Ltd.

Active portfolio management and Active Share, %

The Nordea funds disclose Active Share in the annual and semi-annual reports.

Definition of the key figure

Active Share (AS) is mainly calculated for those equity funds which have a benchmark. AS is reported as a percentage and it illustrates how large a proportion of the fund's portfolio differs from the breakdown of the benchmark.

Active Share indicates the degree of active portfolio management. If the figure is 0–20% when calculating the Active Share it usually refers to a passive fund or fund similar to an index fund. The higher the AS figure the more the equities in the fund's portfolio and/or their weights differ from the breakdown of the benchmark and the more active the fund's investment operations have been.

Concentrated funds

Some funds invest in a concentrated investment universe. If this is the case it will be disclosed in the KID document. The degree of concentration will typically have a limiting effect on the achievable level of active share (the percentage of the portfolio that differs from the benchmark of the fund)

Passive equity funds

Nordea Finnish Passive Fund

The fund's benchmark is OMX Helsinki Benchmark CAP GTR (incl. dividends).

Details on the index and its constituents are available at www.nasdaqomxnordic.com.

The fund is a passively managed equity fund which aims to achieve a return which is corresponding to the performance of the benchmark. The fund seeks to invest in as many companies as possible, represented in the benchmark. The fund mainly makes direct equity investments. In addition the fund may use equity and index derivatives.

The fund aims to follow the benchmark by using so-called full replication, meaning that the composition of the fund corresponds to that of the benchmark as closely as possible. As the fund uses full replication and the fund's investments are widely diversified, the (counterparty) risk related to a single investment target is usually low. The counterparty risk refers normally to a situation where the issuer of an investment instrument does not comply with the agreed terms.

There can occur deviation between the return of the fund unit and the performance of the benchmark, resulting from the Responsible Investment Policy which the fund follows. This means that certain equities included in the benchmark, can be excluded.

Fund management fee, transaction costs, taxes, subscriptions and redemptions, benchmark re-balancing, dividend re-investments among others can have an effect on the fund's ability to follow the benchmark.

The expected level of active risk (tracking error) in normal market conditions is usually below 0.50% according to the Barra risk analysis. This expected (anticipated) tracking error is a forward-looking term, and due to computational reasons, differences can occur between the expected tracking error and the realised, historical tracking error.

Fund management fee, transaction costs, taxes, subscriptions and redemptions, benchmark re-balancing, dividend re-investments among others can have an effect on the fund's ability to follow the benchmark.

Details on the re-balancing frequency are available at www.nasdaqomxnordic.com. The cost effects of re-balancing are low.

Nordea European Passive Fund

The fund's benchmark is MSCI Europe NTR (incl. dividends after taxes).

Details on the index and its constituents are available at www.msci.com.

The fund is a passively managed equity fund which aims to achieve a return corresponding to the performance of the benchmark. The fund seeks to invest in as many companies as possible, represented in the benchmark. The fund mainly makes direct equity investments. In addition the fund may use equity and index derivatives.

The fund aims to follow the benchmark by using so-called full replication, meaning that the composition of the fund corresponds to that of the benchmark as closely as possible. There can occur deviation between the return of the fund unit and the performance of the benchmark, resulting from the Responsible Investment Policy and other exclusions the fund follows. This means that certain equities included in the benchmark, can be excluded.

The Fund promotes environmental and social characteristics as per Article 8 of the EU Sustainable Finance Disclosure Regulation (SFDR). Further information is available in the prospectus and at www.nordea.fi/funds.

The expected level of active risk (tracking error) in normal market conditions is usually below 0.50% according to the Barra risk analysis. This expected (anticipated) tracking error is a forward-looking term, and due to computational reasons, differences can occur between the expected tracking error and the realised, historical tracking error.

Fund management fee, transaction costs, taxes, subscriptions and redemptions, benchmark re-balancing, dividend re-investments among others can have an effect on the fund's ability to follow the benchmark.

Details on the re-balancing frequency are available at www.msci.com. The cost effects of re-balancing are low.

Investments in securities issued by sovereign states and similar public-sector issuers

Fixed income and balanced funds may invest over 35% of their assets in the securities or money market instruments of any one issuer, provided that the issuer or underwriter is the Finnish government, a Finnish municipality or joint municipal authority, a member state of the European Economic Area, a state or other local public corporation of such a country, another OECD member state, or a supranational organization of which at least one member is a member state of the European Economic Area.

Feeder/ master funds and their structure

Feeder fund – Nordea India Fund

The Fund is a feeder fund. The Fund seeks to invest all of its assets (minimum 85%) in Nordea 1 – Indian Equity Fund (share class Y) ("Master Fund"). The fund is a feeder fund, and is therefore not actively managed.

For the Fund no more than 15% of the Fund's assets can be
1) held in liquid assets to the extent required by the operations or
2) invested in such standardised and OTC derivative contracts which can only be used for the purpose of hedging.

The risk and return of the Fund may deviate from the risk and return of the Master Fund depending on the weight of the liquid assets as well as currency fluctuations.

The Fund will be exposed (through investments or cash) to other currencies than the base currency.

The Fund promotes environmental and social characteristics as per Article 8 of the EU Sustainable Finance Disclosure Regulation (SFDR). Further information is available in the prospectus and at www.nordea.fi/funds.

The Fund's base currency is EUR.

The NAV of the Fund is calculated on such days when banks are generally open in Finland as well as in Luxembourg and the NAV calculation of the Master Fund has not been suspended in exceptional circumstances permitted by its rules.

Master fund Nordea 1 – Indian Equity Fund

The Master Fund is an equity fund that invests at least 75% of the total assets in equities and equity-related securities issued by companies that are domiciled, or conduct the majority of their business, in India.

The Master Fund may be exposed (through investments or cash) to other currencies than the base currency.

The Master Fund is actively managed.

Further relevant information on the Master Fund is available free of charge at www.nordea.lu in languages applicable when marketing the Fund.

Master Fund's base currency is USD.

If the amount of subscription, redemption or switch orders in the Master Fund exceed 10% of the Master Fund's NAV, the Master Fund's rules allow to postpone the execution of orders either in part or in full by eight Master Fund's NAV calculation days at the maximum.

The Master Fund's statutory documents are available free of charge at www.nordea.lu in the languages applicable when marketing the Fund.

Information on the master fund organisation

Nordea 1, SICAV is an Undertaking for Collective Investment in Transferable Securities (UCITS / Société d'Investissement à Capital variable, SICAV) established under the laws of the Grand Duchy of Luxembourg.

The board of directors of the UCITS has selected Nordea Investment Funds S.A. as the management company and portfolio management organisation. This has been registered by the financial supervisory authority in Luxembourg. Nordea Investment Funds S.A. has selected

Manulife Investment Management (Singapore) Pte Ltd as the sub-manager of Nordea 1 – Indian Equity Fund.

The fund's depository is J.P. Morgan SE, Luxembourg Branch. The auditor firm is PricewaterhouseCoopers, Luxembourg.

Agreement between the fund companies managing the feeder fund and the master fund

In their agreement governing the disclosure of information, the fund companies managing the feeder fund and the master fund have agreed on the procedures ensuring how and when the fund company managing the master fund delivers to the fund company managing the feeder fund the information and documents on the master fund needed to meet the requirements prescribed in the Finnish Act on Common Funds.

Among other things, the agreement covers the basic conditions of the investment operations of the feeder fund, arrangements relating to subscription and redemption orders, special events affecting subscription and redemption orders, changes to permanent arrangements (such as changes in the documents related to the establishment of the master fund, changes to the Key Information Document and prospectus, reorganisations of the master fund, change of the depository and change of the auditor) as well as the law applied to the agreement.

The agreement is available to unitholders free of charge from the Management Company.

Fees and expenses arising from the investment of the feeder fund's assets and the total expenses of the feeder fund and the master fund

The total expenses of the feeder fund and master fund consist of administrative costs. The charges debited by the feeder fund over a year, ie. administrative costs, are 1.85%. The figure is based on the expenses in 2023, and it may vary from year to year. The master fund's launch date is 5.7.2012.

f

The feeder fund invests in the unit series Y of the master fund. This unit series does not charge a management fee. The investment of the feeder fund's assets in the master fund does not cause other expenses, as Nordea Funds Ltd pays the administrative costs of the master fund on behalf of the feeder fund.

Feeder fund – Nordea China Fund

The Fund is a feeder fund. The Fund seeks to invest all of its assets (minimum 85%) in Nordea 1 – Chinese Equity Fund (share class Y) ("Master Fund"). The fund is a feeder fund, and is therefore not actively managed.

For the Fund no more than 15% of the Fund's assets can be

- 1) held in liquid assets to the extent required by the operations or
- 2) invested in such standardised and OTC derivative contracts which can only be used for the purpose of hedging.

The return and risk of the Fund may deviate from the return and risk of the Master Fund depending on the weight of the liquid assets as well as currency fluctuations.

The Fund will be exposed (through investments or cash) to other currencies than the base currency.

The Fund's base currency is EUR.

The Fund promotes environmental and social characteristics as per Article 8 of the EU Sustainable Finance Disclosure Regulation (SFDR). Further information is available in the prospectus and at www.nordea.fi/funds.

The NAV of the Fund is calculated on such days when banks are generally open in Finland as well as in Luxembourg and the NAV calculation of the Master Fund has not been suspended in exceptional circumstances permitted by its rules.

Master fund Nordea 1 – Chinese Equity Fund

The Master Fund is an equity fund that invests at least 75% of the total assets in equities and equity-related securities issued by companies that are domiciled, or conduct the majority of their business in People's Republic of China.

The Master Fund may invest in, or be exposed to, the following instruments up to the percentage of total assets indicated:

- China A-shares: 50%

The Master Fund will be exposed (through investments or cash) to other currencies than the base currency.

The Master Fund is actively managed.

Further relevant information on the Master Fund is available free of charge at nordea.lu in languages applicable when marketing the fund.

Master Fund's base currency is USD.

If the amount of subscription, redemption or switch orders in the Master Fund exceed 10% of the Master Fund's NAV, the Master Fund's rules allow to postpone the execution of orders either in part or in full by eight Master Fund's NAV calculation days at the maximum.

China-related risk: The master fund's investments in mainland China may involve a higher risk of financial loss, not least due to related operational and regulatory risks, when compared with countries generally regarded as being more developed.

The Master Fund's statutory documents are available free of charge at www.nordea.lu in the languages applicable when marketing the Fund.

Information on the master fund organisation

Nordea 1, SICAV is an Undertaking for Collective Investment in Transferable Securities (UCITS/ Société d'Investissement à Capital variable, SICAV) established under the laws of the Grand Duchy of Luxembourg.

The board of directors of the UCITS has selected Nordea Investment Funds S.A. as the management company and portfolio management organisation. This has been registered by the financial supervisory authority in Luxembourg. Nordea Investment Funds S.A. has selected Manulife Investment Management (Hong Kong) Ltd as the sub-manager of Nordea 1 – Chinese Equity Fund.

The fund's depository is J.P. Morgan SE, Luxembourg Branch. The auditor firm is PricewaterhouseCoopers, Luxembourg.

Agreement between the fund companies managing the feeder fund and the master fund

In their agreement governing the disclosure of information, the fund companies managing the feeder fund and the master fund have agreed on the procedures ensuring how and when the fund company managing the master fund delivers to the fund company managing the feeder fund the information and documents on the master fund needed to meet the requirements prescribed in the Finnish Act on Common Funds.

Among other things, the agreement covers the basic conditions of the investment operations of the feeder fund, arrangements relating to subscription and redemption orders, special events affecting subscription and redemption orders, changes to permanent arrangements (such as changes in the documents related to the establishment of the master fund, changes to the Key Information Document and prospectus, reorganisations of the master fund, change of the depository and change of the auditor) as well as the law applied to the agreement.

The agreement is available to unitholders free of charge from the Management Company.

Fees and expenses arising from the investment of the feeder fund's assets and the total expenses of the feeder fund and the master fund

The total expenses of the feeder fund and master fund consist of administrative costs. The charges debited by the feeder fund over a year, ie. administrative costs, are 1.85%. The figure is based on the expenses in 2023, and it may vary from year to year. The master fund's launch date is 29.11.2013.

The feeder fund invests in the unit series Y of the master fund. This unit series does not charge a management fee. The investment of the feeder fund's assets in the master fund does not cause other expenses, as Nordea Funds Ltd pays the administrative costs of the master fund on behalf of the feeder fund.

Feeder fund – Nordea Conservative Yield Fund

The Fund is a feeder fund. The Fund seeks to invest all of its assets (minimum 85%) in Nordea 1 – Conservative Fixed Income Fund (share class Y) ("Master Fund"). The fund is a feeder fund, and is therefore not actively managed.

For the Fund no more than 15% of the Fund's assets can be
1) held in liquid assets to the extent required by the operations or
2) invested in such standardised and OTC derivative contracts which can only be used for the purpose of hedging.

The return and risk of the Fund may deviate from the return and risk of the Master Fund depending on the weight of the liquid assets.

The Fund's main currency exposure is to the base currency, although the Fund may also be exposed (through investments or cash) to other currencies.

Both the Fund and Master Fund's base currency is EUR.

The NAV of the Fund is calculated on such days when banks are generally open in Finland as well as in Luxembourg and the NAV calculation of the Master Fund has not been suspended in exceptional circumstances permitted by its rules.

Master fund Nordea 1 – Conservative Fixed Income Fund

The Master Fund is a fixed income fund that mainly invests, directly or through derivatives, in bonds, money market instruments and currencies globally.

The Master Fund may invest in corporate and government debt securities and debt-related securities, as well as inflation-linked bonds, covered bonds, convertible bonds, money market instruments, and UCITS/UCIs, including exchange-traded funds. The Master Fund may invest in credit default swaps.

The Master Fund may invest in, or be exposed to, the following instruments up to the percentage of total assets indicated:

- asset- and mortgage-backed securities (ABSs/MBSSs): 20%
- defaulted corporate bonds: 5% (as a result of holding corporate bonds defaulting. The Master Fund will not invest actively in defaulted corporate bonds)
- equities: 2.5% (as a result of holding defaulted securities)

The Master Fund may be exposed (through investments or cash) to other currencies than the base currency.

The Master Fund is actively managed.

Further relevant information on the Master Fund is available free of charge at nordea.lu in languages applicable when marketing the fund.

If the amount of subscription, redemption or switch orders in the Master Fund exceed 10% of the Master Fund's NAV, the Master Fund's rules allow to postpone the execution of orders either in part or in full by eight Master Fund's NAV calculation days at the maximum.

The Master Fund's statutory documents are available free of charge at www.nordea.fi in the languages applicable when marketing the Fund.

Information on the master fund organisation

Nordea 1, SICAV is an Undertaking for Collective Investment in Transferable Securities (UCITS / Société d'Investissement à Capital variable, SICAV) established under the laws of the Grand Duchy of Luxembourg.

The board of directors of the UCITS has selected Nordea Investment Funds S.A. as the management company and portfolio management organisation. This has been registered by the financial supervisory authority in Luxembourg. Nordea Investment Funds S.A. has selected Nordea Investment Management AB as the investment manager of Nordea 1 - Conservative Fixed Income Fund.

The fund's depositary is J.P. Morgan SE, Luxembourg Branch. The auditor firm is PricewaterhouseCoopers, Luxembourg.

Agreement between the fund companies managing the feeder fund and the master fund

In their agreement governing the disclosure of information, the fund companies managing the feeder fund and the master fund have agreed on the procedures ensuring how and when the fund company managing the master fund delivers to the fund company managing the feeder fund the information and documents on the master fund needed to meet the requirements prescribed in the Finnish Act on Common Funds.

Among other things, the agreement covers the basic conditions of the investment operations of the feeder fund, arrangements relating to subscription and redemption orders, special events affecting subscription and redemption orders, changes to permanent arrangements (such as changes in the documents related to the establishment of the master fund, changes to the Key Information Document (KID) and prospectus, reorganisations of the master fund, change of the depositary and change of the auditor) as well as the law applied to the agreement.

The agreement is available to unitholders free of charge from the Management Company.

Fees and expenses arising from the investment of the feeder fund's assets and the total expenses of the feeder fund and the master fund

The total expenses of the feeder fund and master fund consist of administrative costs. The total expenses of the feeder and the master fund are 0.20%. The figure is based on the expenses in 2023, and it may vary from year to year, especially if the management fee has changed during the calendar year. The management fees of Nordea Conservative Yield Fund have been revised upwards as of 1.12.2023, which will be reflected in the administrative costs for 2024.

When the feeder fund invests in the master fund, other expenses such as depositary fee or subscription tax are debited from the assets of the master fund. These costs are included in the administrative costs of the master fund and thereby reflected on the feeder fund as well. The fund turned into a feeder fund on 29.6.2020. The master fund's launch date is 14.5.2020.

Feeder fund – Nordea European Stars Fund

The Fund is a feeder fund. The Fund aims to invest all of its assets (minimum 85%) in the master fund Nordea 1 – European Stars Equity Fund (share class Y) ("Master Fund"). The fund is a feeder fund, and is therefore not actively managed.

For the Fund no more than 15% of the Fund's assets can be
1) Held in liquid assets to the extent required by fund operations or
2) Invested in such standardised and OTC derivative contracts which can only be used for the purpose of hedging.

The return and risk of the Fund may deviate from the return and risk of the Master Fund depending on the weight of the liquid assets.

The Fund will be exposed (through investments or cash) to other currencies than the base currency.

The base currency of both the Fund and the Master Fund is the EUR.

The Fund promotes environmental and social characteristics as per Article 8 of the EU Sustainable Finance Disclosure Regulation (SFDR). Further information is available in the prospectus and at www.nordea.fi/funds.

The NAV of the Fund is calculated on such days when banks are generally open in Finland as well as in Luxembourg and the NAV calculation of the Master Fund has not been suspended in exceptional circumstances permitted by its rules.

Master fund Nordea 1 – European Stars Equity Fund

Specifically, the Master Fund is an equity fund that invests at least 75% of total assets in equities and equity-related securities issued

by companies that are listed, domiciled, or conduct the majority of their business in Europe.

The investments are made with a particular focus on environmental, social and corporate governance aspects.

The Master Fund may be exposed (through investments or cash) to other currencies than the base currency.

The Master Fund is actively managed.

Further relevant information on the Master Fund is available free of charge at nordea.lu in languages applicable when marketing the fund.

If the amount of subscription, redemption or switch orders in the Master Fund exceed 10% of the Master Fund's NAV, the Master Fund's rules allow to postpone the execution of orders either in part or in full by eight Master Fund's NAV calculation days at the maximum.

The Master Fund's statutory documents are available free of charge at www.nordea.lu in the languages applicable when marketing the Fund.

Information on the master fund organisation

Nordea 1, SICAV is an Undertaking for Collective Investment in Transferable Securities (UCITS / Société d'Investissement à Capital variable, SICAV) established under the laws of the Grand Duchy of Luxembourg.

The board of directors of the UCITS has selected Nordea Investment Funds S.A. as the management company and portfolio management organisation. This has been registered by the financial supervisory authority in Luxembourg. Nordea Investment Funds S.A. has selected Nordea Investment Management AB as the investment manager of Nordea 1 – European Stars Equity Fund.

The fund's depositary is J.P. Morgan SE, Luxembourg Branch. The auditor firm is PricewaterhouseCoopers, Luxembourg.

Agreement between the fund companies managing the feeder fund and the master fund

In their agreement governing the disclosure of information, the fund companies managing the feeder fund and the master fund have agreed on the procedures ensuring how and when the fund company managing the master fund delivers to the fund company managing the feeder fund the information and documents on the master fund needed to meet the requirements prescribed in the Finnish Act on Common Funds.

Among other things, the agreement covers the basic conditions of the investment operations of the feeder fund, arrangements relating to subscription and redemption orders, special events affecting subscription and redemption orders, changes to permanent arrangements (such as changes in the documents related to the establishment of the master fund, changes to the Key Information Document (KID) and prospectus, reorganisations of the master fund, change of the depositary and change of the auditor) as well as the law applied to the agreement.

The agreement is available to unitholders free of charge from the Management Company.

Fees and expenses arising from the investment of the feeder fund's assets and the total expenses of the feeder fund and the master fund

The total expenses of the feeder fund and master fund consist of administrative costs. The total expenses of the feeder and the master fund unit series A are 1.47%. The consist of administrative costs for other unit series of the fund are presented in section 'Fees, administrative costs and turnover rates for the Nordea funds as well as minimum subscriptions'. The figure is based on the expenses in 2023, and it may vary from year to year.

When the feeder fund invests in the master fund, no administration fee, depositary fee, subscription tax or other expenses are debited from the assets of the master fund. The fund turned into a feeder fund on 10.5.2022. The master fund's launch date is 14.11.2017.

Feeder funds solely focused on the Norwegian markets

Feeder fund – Nordea Private Banking Kort Obligasjon Pluss Fund

The Fund is a feeder fund. The Fund seeks to invest all of its assets (minimum 85%) in Verdipapirfondet Nordea Kort Obligasjon Pluss ("Master Fund"). The fund is a feeder fund, and is therefore not actively managed.

| Nora Fund Four (NOK) | 0.73 | Nora Fund Four Master | 0.74 |

Fees and expenses arising from the investment of the feeder fund's assets and the total expenses of the feeder fund and the master fund

The total expenses of the feeder fund and master fund consist of administrative costs. The figure is based on the expenses over the previous calendar year, and it may vary from year to year.

The management fees of the feeder funds vary 0.64–0.79 % p.a. and those of the master funds 0.64–0.79 % p.a. The total expenses of the feeder fund and master fund which are caused by the management fee are however e.g. 0.64% p.a., for the reason that no management fee is charged for the feeder fund's investments in the master fund. The management fee of the master fund is otherwise 0.64–0.79 % p.a.

As for the feeder fund's investments in the master fund, no subscription or redemption fees are charged. As for the master fund's investments in the domestic and foreign underlying Nordea funds, no subscription or redemption fees are charged. As for the master fund's investments in other Nordea funds, no management fee is charged from the underlying funds' assets. However, a performance-based fee (that is a part of the management fee) corresponding to the units in the underlying investment funds or collective

investment undertakings (UCIs) can be charged from the assets of these funds/ undertakings. When the master fund invests in foreign UCIs managed by Nordea, no subscription tax or other expenses will usually be charged from the assets of the UCIs. These other costs are typically levied on the assets of UCIs.

The total expenses of the feeder and master funds consist therefore of the feeder fund's management fee and the other expenses, which are charged from the assets of the underlying exchange-traded funds (ETFs) in which the master fund has possibly invested and which are not managed by Nordea.

The basic currency of the feeder funds is SEK, NOK or EUR and that of the master funds EUR. The feeder fund subscribes for euro-denominated growth units in the master fund. Any income received from the feeder fund's investments is reinvested. In the same way, the units in the master fund are growth units.

Information on the master fund organisation

Both the feeder funds and the master funds are registered in Finland and they are managed by Nordea Funds Ltd.

J.P. Morgan SE – Helsinki branch acts as the funds' depository. The auditor firm is PricewaterhouseCoopers Oy, Authorised Public Accountant Firm.

The launch date of the feeder fund (NOK) is 9.4.2019. The launch date of the master fund is 9.4.2019. The feeder fund has been marketed in Norway as of 9.4.2019.

Objective and investment policy – feeder and master fund

The Fund is a feeder fund. The Fund seeks to invest all of its assets (minimum 85%) in the master fund Nordea Sustainable Fixed Income Global Fund ('Master Fund'). The fund is a feeder fund, and is therefore not actively managed.

No more than 15% of the feeder Fund's assets can be

- 1) Held in liquid assets to the extent required by the operations or
- 2) Invested in such standardised and OTC derivative contracts which can only be used for the purpose of hedging.

The risk and return of the Fund may deviate from the risk and return of the Master Fund depending on the weight of the liquid assets as well as currency fluctuations.

The feeder Fund's main currency exposure is to the base currency, although the Fund may also be exposed (through investments or cash) to other currencies.

Nordea Sustainable Selection Fixed Income Global Fund (master fund), Nordea Bærekraftige Obligasjoner Global Fund (NOK) (feeder fund) and Nordea Hållbarhetsfond Obligationer Global Fund (SEK) (feeder fund) promote environmental and social characteristics as per Article 8 of the EU Sustainable Finance Disclosure Regulation (SFDR). Further information is available in the prospectus and at www.nordea.fi/funds.

Specifically, the Master Fund is a fund of funds that invests mainly in units of other investment funds (UCITS), non-UCITS funds, alternative investment funds and Undertakings for Collective Investments (UCIs).

Furthermore, the Master Fund may invest up to 45% of the total assets in bonds, debt securities and other fixed income instruments issued by governments, public authorities, supranational institutions as well as companies.

The investments are made globally with particular focus on environmental, social and corporate governance aspects.

The Master Fund is actively managed.

The majority of the Master Fund's direct investments, other than those issued or guaranteed governments shall have a long-term credit rating of at least BBB-, Baa3 (or a corresponding). If the instrument does not have a credit rating, the credit rating of the issuer is monitored.

The range of the modified duration of the Master Fund is 0–10.

A major part of the Master Fund's currency exposure is hedged to the base currency, although the Fund may also be exposed (through investments or cash) to other currencies.

The risk category (SRI) has been updated in accordance with the Key Information Document (KID) in early 2023.

Fees and expenses arising from the investment of the feeder fund's assets and the total expenses of the feeder fund and the master fund

The total expenses of the feeder fund and master fund consist of administrative costs. The figure is based on the expenses over the previous calendar year, and it may vary from year to year.

The management fee of the feeder and master funds is 0.75% p.a. The total expenses of the feeder fund and master fund which are caused by the management fee are however e.g. 0.75% p.a., for the reason that no management fee is charged for the feeder fund's investments in the master fund. The management fee of the master fund is otherwise 0.75% p.a.

As for the feeder fund's investments in the master fund, no subscription or redemption fees are charged. As for the master fund's investments in the domestic and foreign underlying Nordea funds, no subscription or redemption fees are charged. As for the master fund's investments in other Nordea funds, no management fee is charged from the underlying funds' assets. However, a performance-based fee (that is a part of the management fee) corresponding to the units in the underlying investment funds or collective investment undertakings can be charged from the assets of these funds/ undertakings. Even other expenses can be charged from the assets of the underlying collective investment undertakings managed by Nordea, and these are included in the administrative costs of the master fund.

The total expenses of the feeder and master funds consist therefore of the feeder fund's management fee and the other expenses, like depositary fee and subscription tax, which are charged from the assets of the underlying foreign collective investment undertaking in which the master fund has possibly invested.

The basic currency of the feeder funds is SEK or NOK and that of the master funds EUR. The feeder fund subscribes for euro-denominated growth units in the master fund. Any income received from the feeder fund's investments is reinvested. In the same way, the units in the master fund are growth units.

Information on the master fund organisation

Both the feeder funds and the master funds are registered in Finland and they are managed by Nordea Funds Ltd.

J.P. Morgan SE – Helsinki branch acts as the funds' depository. The auditor firm is PricewaterhouseCoopers Oy, Authorised Public Accountant Firm.

Nordea European Smaller Companies

– *Exceptional procedure in subscription for and redemption of fund units*

Units in the fund can be subscribed for and redeemed twice a calendar month. Subscriptions and redemption orders are executed on the second and fourth Wednesday of each calendar month (transaction date, T). If this is a non-banking day in Finland the transaction day will be following banking day.

Orders must be given at the latest two weeks ie. ten (10) banking days before the said transaction date (T) in such a way that the orders is received and registered at the Fund Company on the last transaction date before 16.30 Finnish time or before 15.30 Swedish time, whereas in Norway, before 10.00 Norwegian time (ie. before 11.00 Finnish time).

The execution of the orders given on the last transaction day at or after 16.30 Finnish time or 15.30 Swedish time or 10.00 Norwegian time will be postponed by one transaction day and will be executed four weeks later.

| Cut-off time | Transaction date (T) | Transfer of proceeds to/from account |
|-------------------------------|---|--------------------------------------|
| T-10, 16.30 Finnish time | Orders received before the cut-off time will be executed on the transaction date. | T+2 |
| T-10, 15.30 Swedish time | | T+2 |
| T-10, 10.00 Norwegian time | | T+2 |

The table lists the transactions days and the corresponding last order days until the end of 2024 (valid for Finland, Sweden and Norway).

Exchanges from or to Nordea European Smaller Companies and other are not possible.

Exchanges from an external, non-Nordea sub-fund to either a Nordea fund or to another external sub-fund are not possible.

Fees

– Subscription and redemption fees

The Management Company will not charge any fees in connection with the subscription or redemption of fund units. Distributors/ intermediaries can however charge a fee of their own in accordance with the list of fees and costs of the distributor/ intermediary.

In addition to the existing unit series offered to private and/or institutional investors, the Management Company can, at its discretion, decide to offer in the future Fund unit series that are designed for different target groups and differ from each other in terms of the management fee and/or minimum subscription, for example. Each such series can have both distribution and growth units (unit class).

The Board of Directors of the Management Company may decide that the Fund has different unit series that deviate from each other in terms of the management fee. The subscription requirements of different fund unit series may differ in terms of the subscription amount, market area (country) or the customer's total relationship concerning or employment at the Nordea Group. In addition to these, if the unitholder has entered into a contract for tied long-term savings and if the assets are invested in fund units in accordance with the contract, a specific PS unit series may be used.

No handling fees are charged upon issuing and delivering a unit certificate. Registration of a transfer of right of ownership from one customer to another is free of charge.

– Management fee

The Management company charges a fixed management fee (fee % / 365) for the management of the investment fund's assets. The management fee is determined as an annual percentage of the value of the entire investment fund. The management fee (p.a.) is taken into account in calculating the daily NAV (Net Asset Value) per unit, ie., it is deducted from the NAV per unit, meaning that it is not charged from the unitholder separately. The depositary's fee is included in the management fee.

The management fee covers virtually all the costs incurred by the Management Company for the management of the investment fund in accordance with the prevailing practice in Finland. These include the costs of carrying out the fund's investment activities and managing the fund's actual administration, such as NAV calculation and maintenance of the unitholder register, as well as the production of fund material required by law or regulations laid down by authorities. Transaction costs are not included in the management fee however. In addition to the management fee and transaction costs, no other expenses are charged from the fund's assets in Finland.

– Fund-of-funds and their fee structure

In most cases, the fund of funds does not pay subscription or redemption fees when investing in funds managed by the fund companies belonging to Nordea Group or when selling units in an underlying fund.

As for the fund of fund's investments in domestic or foreign Nordea funds, the management fee of the underlying target funds does not affect the fund of fund's total management fee that is fixed. When the fund of funds invests in a Nordea fund, the management fee charged from the assets of the underlying fund and paid to the Management Company, corresponding the fund of fund's investment, will be returned to the fund of funds to avoid double charging of the management fee.

It is also possible to charge other expenses from the assets of foreign collective investment undertaking managed by Nordea, including fees paid to the auditors and to the depository. The administrative costs of the funds of funds are affected by the above-mentioned fees if the fund of funds invests in these undertakings – including the funds which are feeder funds with a master fund itself is a fund of funds.

In addition to the annual management fee, the performance of the NAV per unit is affected by the fixed and variable management fees or other costs charged from the assets of the underlying external funds or collective investment undertakings not managed by Nordea, and ETF's management fees.

Taxation**Taxation of investment funds**

Investment funds registered in Finland are entities exempt from income tax. An investment fund does not pay any tax on its capital gains in Finland, or on dividends and interest income derived from Finland. On dividend and interest income derived from abroad, a fund pays the tax at source specified in the tax treaty between the country in question and Finland.

Taxation of unitholders

The taxation of unitholders described herein relates to natural persons generally liable to taxation in Finland.

A fund investor may receive capital gain when selling (redeeming) fund units. The capital gain is the difference between the redemption price and the subscription price. If fund units are sold at a price lower than their subscription price, the unit holder suffers a capital loss. Capital losses may be deducted from capital gains during the tax year and the five subsequent years, as gains are generated.

The fund dividend paid on the fund's distribution units and the capital gain possibly arising from the redemption of fund units are deemed as capital income, on which in 2023 a 30% tax is charged from the unitholder (the tax rate on the portion exceeding EUR 30 000 is 34%). The Management Company will collect withholding tax on the fund dividend paid on distribution units in connection with the payment. No withholding tax is collected on sales profits arising from the redemption of fund units.

The capital gain earned from the sale of fund units can be calculated in two ways - either by calculating the actual capital gain, or by calculating the 'presumed acquisition cost'. The actual capital gain is calculated by deducting the fund units' subscription price and costs of acquisition and sale from their redemption price.

However, instead of declaring the actual capital gain, a calculation based on the presumed acquisition cost may be used. In this case, instead of deducting the actual subscription price, the presumed

acquisition cost alone is deducted from the redemption price in calculating the capital gain. If the fund units have been held for less than 10 years, the presumed acquisition cost is 20% of the redemption price. If the fund units have been held for at least 10 years, the presumed acquisition cost is 40% of the redemption price. When using the presumed acquisition cost, fees such as subscription and redemption fees cannot be deducted.

Losses that may arise from redemption can be deducted from the sales profits received during the taxation year and five subsequent years. Redemption losses occurred in 2016 and thereafter can also be deducted from other capital gains than from the sales profit. However, capital gains are not considered taxable income, if the combined sales prices of the assets sold during the tax year do not exceed EUR 1,000. On the other hand, sales losses arising during the tax year are not deductible if the combined sales prices of the assets sold during the tax year do not exceed EUR 1,000 and the combined acquisition costs of the assets sold during the same tax year do not exceed EUR 1,000. Sales other than fund unit sales may be taken into account in calculating the EUR 1,000 thresholds.

When selling fund units that have been acquired at different times, the acquisition price of the sold units is formed so that the units acquired first are deemed to be sold first, unless the taxpayer proves otherwise.

The Management Company submits annually the fund unit sale transactions and ownership information to the Finnish tax authorities. The unit holder must also personally notify the tax authorities of sale of fund units and the sales profit or loss arising from it.

In accordance with the Act on Taxation of Income and Capital of a Person Subject to Limited Tax Liability, the profit paid by the fund to a person with limited tax liability is subject to a 30% withholding tax, unless a lower tax rate has been agreed upon in the relevant tax treaty. The Management Company will provide the tax authorities with an annual report on the distribution of profit. No withholding tax is charged on sales profits, but they are taxed in the recipient's state of residence.

The taxation of the profits or sales profits earned by individual investors depends on which country's tax laws are applied. If the investor is unsure of his/her taxation status, he/she should contact experts offering tax advice.

Settlement of disputes and out-of-court redress procedures

In matters related to fund investments, customers should primarily contact the customer service of the distributor of the fund. When the fund is distributed by Nordea Bank Abp, the customer should primarily contact the branch office of Nordea, the branch office of Nordea Bank, Finnish Branch Private Banking or Nordea Customer Service, tel. +358 (0)200 70 000 (local call charge/mobile call charge).

Should there be any disagreements that cannot be settled through negotiation, the customer may turn to the Finnish Financial Ombudsman Bureau (FINE) for information on investment services and, if necessary, take disputes to the Finnish Financial Ombudsman Bureau.

Contact information for the FINE:

Finnish Financial Ombudsman Bureau, Porkkalankatu 1, 00180 Helsinki. E-mail info@fine.fi, tel. +358 (0)9 6850 120. For further information and a contact form please go to www.fine.fi.

¹⁾ **Rules/ Date:** the last time the rules of the funds compliant with the UCITS directive, meaning all the investment funds, were ratified by the Finnish Financial Supervisory Authority or the last time the rules of an alternative, ie. a non-UCITS, fund have been submitted to the Finnish Financial Supervisory Authority for information.

The valid common rules of the Nordea funds registered in Finland and managed by Nordea Funds Ltd were ratified on 22 March 2022. The common rules are in force as of 10 May 2022.

* NIM Den – Nordea Investment Management AB, Denmark, branch of Nordea Investment Management AB, Sverige, registered in Denmark.
 ** NIM AB – Nordea Investment Management AB, registered in Sweden.
 *** NIM Fi – Nordea Investment Management AB, Finnish Branch, registered in Finland.
 **** NIM No – Nordea Investment Management AB, NUF filial Norge.

The financial period of the funds is a calendar year. The Fund's financial statements are published in connection with the annual report within three months from the end of the financial period.

Fees, administrative costs and turnover rates for the Nordea funds as well as minimum subscriptions

- The fund/ management company will not charge any fees in connection with the subscription or redemption of fund units. Distributors/ intermediaries can however charge a fee of their own in accordance with the list of fees and costs of the distributor/intermediary.
- Unit series refer to the letter codes like A, B, I or S whereas unit classes relate to growth units and distribution units with equal fees. The table below shows only the growth units with certain exceptions.
- Under a fund savings agreement, the minimum amount is EUR 10.
- When saving in funds in accordance with a fund savings agreement, the subscription can only be made for growth unit.
- Administrative costs⁽¹⁾ (formerly Ongoing charges) are presented in the Key Information Document (KID). Administrative costs indicate the fund's total expenses as per the previous calendar year. Alternatively, an estimate of the administrative costs is presented in the KID if the management fee has changed since the year end. The administrative costs for the previous calendar year are presented in the table below.
- Administrative⁽¹⁾ costs refer to management fees and other administrative or operating costs (the percentage includes management fee).

Target group

- * These funds, unit series or unit classes are targeted at customers who have a discretionary portfolio management agreement with Nordea.
- ** In regard to certain funds, unit series A is targeted at private customers, unit series P at Premium customers, Y at companies as well as other corporate customers, and I respectively targeted at institutional customers.
- ** For the following fund families, the official fund name is disclosed in the table below: Premium Asset Management and Sustainable Selection. As for these funds, a marketing name for unit series is also used. More information under the table.

| Fund/ unit series | ISIN code | Base cur- rency | Sub- scrip- tion cur- rency | Manage- ment fee % p.a. | Admin. costs(1) % p.a. 2023 (formerly Ongoing charges) | Turn- over rate % 2023 | Tar- get group | Minimum subscription |

Turnover rate

The turnover rate describes how frequently assets within a fund are bought and sold by the managers. The higher the turnover rate, the more the fund has traded in addition to trading due to subscriptions and redemptions. The turnover rate for the last calendar year has been presented. The turnover rate is calculated by subtracting from the total value of the securities bought and sold by the fund (sum 1, EUR) the combined value of the subscriptions and redemptions (sum 2, EUR). The turnover rate is the difference of the above sums (sum 2 subtracted with sum 1), divided with the average market capitalization of the fund. The average market capitalization of the fund is calculated based on the day specific market value during the last 12 months. If the turnover rate is 0 %, subscriptions and redemptions of fund units have mainly affected the trading of the fund. The turnover rate can also be negative, in which case the combined value of the subscriptions and redemptions exceeds the combined value of the purchases and sales of the fund.

Summary risk indicators (SRI) according to the PRIIPS KID, and investor target group

Investors should have sufficient knowledge of investing in funds and of the fund in order to understand whether the fund suits them. The investor must study the characteristics and risks of the fund and investing in funds, mentioned in this prospectus, and understand and accept them. The details of the fund are available in the fund rules and Key Information Document (KID). The funds are allocated in the risk categories listed in the table below on the basis of the risk indicator SRI disclosed in the KID valid **at the end of December 2023**.

The value of an investment in a fund may increase or decrease. When redeeming the fund investment, the investor may receive less money than the original amount invested. The fund is not covered by the Investor's Compensation Fund or the deposit guarantee. The summary risk indicator and risk-reward profile of a fund can change. Their development can be followed in the KID.

| Risk category/ risk indicator | Fund | Investor target group |
|----------------------------------|--|--|
| Very low 1 | Nordea Private Banking Kort Obligasjon Pluss Fund | <p>The lowest risk categories 1 or 2 do not mean a risk-free investment. Funds classified under risk category 1 are mainly short-term bond funds, typically with a low modified duration.</p> <p>Category 1: The fund suits cautious investors who primarily want to invest in fixed-income markets and prefer as low interest-rate risk as possible and a moderate credit risk.</p> <p>The fund is also suitable for companies' cash management purposes. Companies can enter into a service agreement on automatic transfer of liquid assets from a payment account into the fund and vice versa.</p> <p>The fund has been classified under category 1 if the fund's VaR-equivalent volatility is between 0.0 and 0.5%. VaR refers to Value-at-Risk.</p> |
| Low 2 | Nordea Bærekraftige Obligasjoner Global Fund Nordea Conservative Yield Fund Nordea Corporate Bond Fund Nordea Defensive Fund Nordea Euro Medium Term Bond Fund Nordea Fixed Income Credit Opportunities Fund Nordea Focus Fixed Income Fund Nordea Hållbarhetsfond Obligationer Global Fund Nordea Kreditt Stars Fund Nordea Moderate Yield Fund Nordea Nordic Covered Bond Fund Nordea Obligasjon Stars Fund Nordea Private Banking FRN Fund Nordea Private Banking Obligasjon Fund Nordea Savings Fixed Income Fund Nordea Stratega Fixed Income Fund Nordea Sustainable Fixed Income Global Fund Nordea SWE Inflation Linked Bond Fund Nordea SWE Institutional Short Duration Bond Fund Nordea Yield Fund | <p>The lowest risk categories 1 or 2 do not mean a risk-free investment. Funds classified under risk category 2 are mainly short-term, medium-term or long-term bond funds or fixed-income-oriented balanced funds which can also be fund of funds where the investments are most often broadly diversified. This category includes both government bond and corporate bond funds.</p> <p>Category 2: The fund suits moderate investors who primarily want to invest in bonds issued by both governments and companies and prefer a rather high interest-rate risk and a medium credit risk.</p> <p>The fund suits moderate investors who through fixed-income-oriented balanced funds primarily want to invest in a diversified portfolio of bonds issued by governments and/or companies and accept a rather high interest-rate risk and a moderate credit risk.</p> <p>The fund has been classified under category 2 if the fund's VaR-equivalent volatility is between 0.5 and 5.0%. VaR refers to Value-at-Risk.</p> |
| Medium low 3 | Nora Fund Four (NOK) Nora Fund Four (SEK) Nora Fund Three (EUR) Nora Fund Three (NOK) Nora Fund Three (SEK) Nora Fund Three Master Nora Fund Two (SEK) Nora Fund Two Master Nordea Discretionary Corporate Credit Fund Nordea Emerging Market Bond Fund Nordea Euro Bond Fund Nordea European High Yield Fund Nordea Global High Yield Fund Nordea Navigo Nordea Premium Asset Management Balanced Fund Nordea Premium Asset Management Conservative Fund Nordea Premium Asset Management Moderate Fund Nordea Pro Euro Bond Fund Nordea Savings 15 Fund Nordea Savings 30 Fund Nordea Savings 50 Fund Nordea Stable Return Fund | <p>Funds classified under risk category 3 are mainly long-term high-yield bond funds, emerging market bond funds or other than fixed-income-oriented balanced funds. This category includes both government bond and corporate bond funds.</p> <p>Category 3: The fund suits investors who seek relatively high return and who primarily want to invest part of their assets in a diversified portfolio of high-yield bonds and accept a high interest-rate and a rather high credit risk.</p> <p>The fund suits investors who seek relatively high return and who primarily want to invest part of their assets in a portfolio of emerging market bonds and prefer a high interest-rate and a high credit risk.</p> <p>The funds classified under category 3 are also suitable for long-term investing in funds, meaning saving in funds, where the investor seeks to stabilise the risk relating to timing by, for example, investing a certain amount at regular intervals.</p> <p>The fund has been classified under category 3 if the fund's VaR-equivalent volatility is between 5.0 and 12.0%. VaR refers to Value-at-Risk.</p> |

Errors possibly occurred in the net asset value (NAV) calculation of the funds

When determining the materiality of an error in the NAV calculation, the below-mentioned principles are applied. A calculation error is considered material when it exceeds a certain limit. In those situations where the limit for material error in the NAV calculation is exceeded, the internal instructions of the Management Company and the instructions given by the Financial Supervisory Authority are applied. The Management Company applies a minimum threshold of 5 euros when compensating for a loss to the unitholders. The funds are divided in four different categories on the basis of the fund-specific annual, VaR-equivalent volatility of the growth unit. Those funds for which volatility over the last calendar year is not available and which have started operations after the year end, have been classified under category 1 (volatility < 0.5).

[Volatilities for 2023 used when determining the limits for a material error in the NAV calculation.](#) Published on 19.4.2024.

| Category | Volatility | Limit for materiality of NAV calculation errors |
|----------|--------------|---|
| 1 | < 0.5 | ≥ 0.1 |
| 2 | ≥ 0.5 ja < 5 | ≥ 0.2 |
| 3 | ≥ 5 ja < 12 | ≥ 0.3 |
| 4 | ≥ 12 | ≥ 0.5 |

Information about possible errors in the net asset value (NAV) calculations of the funds registered in Finland and managed by Nordea Funds Ltd is available at Nordea Funds Ltd. The table lists the fund-specific limits for a material error as a percentage of the NAV of the fund.

MSCI indices – disclaimer

This Fund (Nordea European Passive Fund, Nordea Global Passive Fund, Nordea World Passive Fund) is not sponsored, endorsed, sold or promoted by MSCI INC. ("MSCI"), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI Index (Collectively, The ("MSCI PARTIES"). The MSCI Indexes are the exclusive property of MSCI. MSCI and the MSCI Index names are service mark(s) of MSCI or its affiliates and have been licensed for use for certain purposes by (licensee). None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of this fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI Index to track corresponding stock market performance. MSCI or its affiliates are the licensors or certain trademarks, service marks and trade names and of the MSCI Indexes which are determined, composed and calculated by MSCI without regard to this fund or the issuer or owners of this Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of this Fund or any other person or entity into consideration in determining, composing or calculating the MSCI Indexes. None of the MSCI Parties is responsible for or has participated in the determination of the timing of, prices at, or quantities of this Fund to be issued or in the determination or calculation of the equation by or the consideration into which this Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of this Fund or any other person or entity in connection with the administration, marketing or offering of this Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI Indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI Index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the fund, owners of the fund, or any other person or entity, from the use of any MSCI Index or any data included therein. None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI Index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties of any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI Index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Nordea Finnish Passive Fund – disclaimer

The fund is tracking the OMX Helsinki Benchmark CAP GTR Index. However, the fund is not sponsored, endorsed or promoted by The NASDAQ OMX Group, Inc. or its affiliates (NASDAQ OMX, with its affiliates, are referred to as the "Corporations" in the following). The Corporations have not passed on the legality or suitability of, or the accuracy or adequacy of descriptions and disclosures relating to the fund. The Corporations make no representation or warranty, express or implied to the investors of the fund or any member of the public regarding the advisability of investing in securities generally or in the fund particularly, or the ability of the OMX Helsinki Benchmark CAP GTR Index to track general stock market performance. The Corporations' only relationship to Nordea Funds Oy is in the licensing of the NASDAQ®, OMX®, NASDAQ OMX®, and OMX Helsinki Benchmark CAP GTR Index registered trademarks and certain trade names of the Corporation and the use of the OMX Helsinki Benchmark CAP GTR Index which is determined, composed and calculated by NASDAQ OMX without regard to Nordea Fund Oy's funds. NASDAQ OMX has no obligation to take the needs of Nordea Fund Oy or the investors of the fund into consideration in determining, composing or calculating the OMX Helsinki Benchmark CAP GTR Index. The Corporations are not responsible for and have not participated in the determination of the timing or prices of the fund. The Corporations have no liability in connection with the administration, marketing or trading of the fund.

The Corporations do not guarantee the accuracy and/or uninterrupted calculation of the OMX Helsinki Benchmark CAP GTR Index or any data included therein. The Corporations make no warranty, express or implied, as to results to be obtained by Nordea Funds Oy or the investors of the fund, or any other person or entity from the use of the OMX Helsinki Benchmark CAP GTR Index or any data included therein. The Corporations make no express or implied warranties, and expressly disclaim all warranties of merchantability or fitness for a particular purpose or use with respect to the OMX Helsinki Benchmark CAP GTR Index or any data included therein. Without limiting any of the foregoing, in no event shall the Corporations have any liability for any lost profits or special, incidental, punitive, indirect, or consequential damages, even if notified of the possibility of such damages.

Additional information for investors in Denmark

The following information is intended for investors subscribing for shares of the Funds in Denmark.

Taxation of Danish investors

The Fund Company is an investment company in accordance with section 19 of the Danish Act on taxation of gains on equities. Investors' gains and losses are thus taxed on an annual basis according to the market-value principle. The market-value principle means that investors are subject to annual taxation on an on-going basis as the value of the shares is to be computed at the end of each year in such a way that gains and losses relative to the value at the end of the last income year – or relative to the purchase price if the shares have been purchased in the course of the income year – are to be included in the computation of the value at the end of the current year. In case of sale or redemption the computation is made relative to the value at the end of the most recent income year or the purchase price if the shares have been bought in the same year.

For natural persons gains and losses are included in the capital income, for companies in the company income and for institutional investors in the tax base according to the Danish Act on taxation of pensions.

Persons using the Danish scheme for tax treatment of enterprises may use assets comprised by this scheme to purchase shares. Pension assets may also be used to purchase shares.

Important information for investors residing in the US

Residents of or entities operating in the US are not permitted to subscribe for Nordea funds.

Important information for US Persons

The services and products of Nordea Funds Ltd may not be directly or indirectly offered or sold in the United States of America. US Persons may not subscribe for units in the investment funds managed by Nordea Funds Ltd in any of the Nordic countries where the management company and its branches are located.

The term US Person, for the purpose of this prospectus, means "U.S. Person" as defined by Rule 902 of Regulation S, and does not include any "Non-United States person" as used in Rule 4.7 under the U.S. Commodity Exchange Act, as amended.

"U.S. Person" as defined by Rule 902 of Regulation S includes, but is not limited to: (i) any natural person resident in the United States of America; (ii) any partnership or corporation organised or incorporated under the laws of the United States of America; (iii) any estate of which any executor or administrator is a US Person; (iv) any trust of which any trustee is a US Person; (v) any agency or branch of a non-US entity located in the United States of America; (vi) any non-discretionary account or similar account (other than an estate or trust) held by a dealer or other fiduciary for the benefit or account of a US Person; (vii) any discretionary account or similar account (other than an estate or trust) held by a dealer or other fiduciary organised,

NORDEA FUNDS LTD

incorporated, or (if an individual) resident in the United States of America; and (viii) any partnership or corporation if: (1) organised or incorporated under the laws of any foreign jurisdiction; and (2) formed by a US person principally for the purpose of investing in securities not registered under the Securities Act, unless it is organised or incorporated, and owned, by accredited investors (as defined under Rule 501a under the Securities Act) who are not natural persons, estates or trusts.

Important information for persons and institutional investors intending to subscribe for units in the Nordea India Fund

Due to Indian legislation, no single investor may hold more than 10% of the NAV of the Fund. Neither may non-resident Indians (means a person resident outside India who is a citizen of India or a person of Indian origin specified in the applicable law) hold more than 60% of the NAV of the Fund on an aggregate level.

Sustainability-related information

Sustainability-related information in accordance with article 6 of the Sustainable Finance Disclosure Regulation (SFDR), EU regulation 2019/ 2088 on sustainability information in the financial services sector.

The funds listed above are classified as article 6 funds in accordance with the SFDR regulation.

Sustainability risks**a. Integration of sustainability risks in the investment decisions**

Sustainability risks are included in the investment decision process together with traditional financial factors, such as risk and valuation metrics, when building and monitoring portfolios.

Exclusions of certain sectors and/or financial instruments from the investable universe are expected to reduce the sustainability risk of the fund. Conversely, such exclusions may increase the concentration risk of the fund which could – seen in isolation – result in higher volatility and a greater risk of loss.

[The Responsible Investment Policy](#) describing the exclusions applied by all the funds mentioned in this prospectus can be found on Nordea Funds' website at www.nordeafunds.com/downloads.

More information on the integration of sustainability risks is available in the prospectus and sections "Risks relating to fund investment" and "Sustainability risk".

b. Potential impacts of sustainability risks on the return of the fund

Taking sustainability factors into account in the fund's investment activities is expected to reduce the sustainability risk and thus also the overall risk of the fund's investments. The integration of sustainability risks in the fund's investment decisions is not expected to have a significant impact on the fund's long-term return potential.

Sustainability risk may significantly increase the volatility of the investment return of the fund.

No sustainable investment objective

The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Adverse sustainability impacts at financial product level

The funds listed above do not consider principal adverse impacts on sustainability factors.

- Nordea Swedish Institutional Short Duration Bond Fund
- Nordea World Passive Fund
- Nordea Yield Fund

Sustainability-related information

Sustainability-related information in accordance with article 8 of the Sustainable Finance Disclosure Regulation (SFDR), EU regulation 2019/ 2088 on sustainability information in the financial services sector.

The funds listed above promote environmental and social characteristics as per Article 8 of the EU Sustainable Finance Disclosure Regulation (SFDR).

Sustainability risks

a. Integration of sustainability risks in the investment decisions in the funds listed above

Sustainability risks are included in the investment decision process together with traditional financial factors, such as risk and valuation metrics, when building and monitoring portfolios.

Exclusions of certain sectors and/or financial instruments from the investable universe are expected to reduce the sustainability risk of the fund. Conversely, such exclusions may increase the concentration risk of the fund which could – seen in isolation – result in higher volatility and a greater risk of loss.

[The Responsible Investment Policy](#) describing the exclusions applied by all the funds mentioned in this prospectus can be found on Nordea Funds' website at www.nordeafunds.com/downloads.

Funds promoting environmental or social characteristics apply additional fund-specific exclusions. The fund-specific exclusions are described in "The fund-specific sustainability-related website disclosures as per article 10 of the SFDR" at www.nordea.fi/fundsnow.

Further, as for the Stars funds marked with * above, an enhanced analysis on Environmental, Social and Governance (ESG) issues is performed on each financial instrument in the fund, and included in the investment decision process together with traditional financial factors, such as risk and valuation metrics, when building and monitoring portfolios. In addition, the sustainability risk profile of these funds benefit further from the application of specific, proprietary ESG analysis.

More information on the integration of sustainability risks is available in the prospectus and sections "Risks relating to fund investment" and "Sustainability risk".

b. Potential impacts of sustainability risks on the returns of the fund

Taking sustainability factors into account in the fund's investment activities is expected to reduce the sustainability risk and thus also the overall risk of the fund's investments. The integration of sustainability risks in the fund's investment decisions is not expected to have a significant impact on the fund's long-term return potential.

Sustainability risk may significantly increase the volatility of the investment return of the fund.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Asian Stars Fund

Legal entity identifier: 549300Z6YEQ8TU0FFP49

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☒

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒

with a social objective

☐

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

The fund is managed according to the Stars investment strategy which includes a commitment to analyse and select investments that epitomise the ESG characteristics of the fund. The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the investee company. Furthermore, each company's business model alignment with relevant UN SDGs is taken into consideration as well as the company's approach to managing ESG risks. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. Stars eligible investments must have an ESG score in the A or B range as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

Engagement and stewardship

On behalf of its clients, NAM undertakes a range of engagement activities with investee companies and corporate- and sovereign issuers in order to encourage them to improve their ESG practices, and promote a long-term approach to decision-making.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded.

- Minimum 50% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

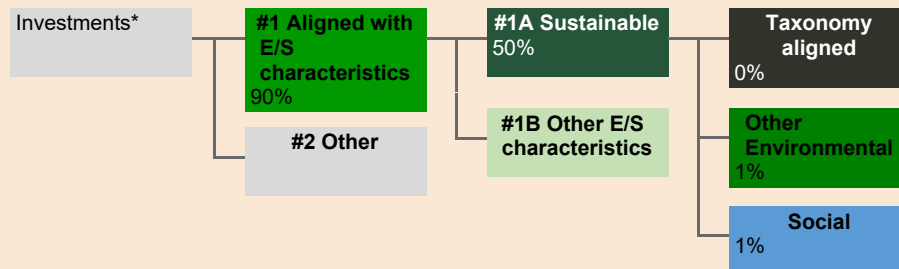

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund’s holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Bærekraftige Obligasjoner Global Fund

Legal entity identifier: 549300DRBP2V0PV11U23

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. The strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and ESG laggards are excluded by setting minimum thresholds for ESG scores on investments in individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

☒ Taxonomy-aligned: Fossil gas
☒ Taxonomy-aligned: Nuclear
☒ Taxonomy-aligned (no fossil gas & nuclear)
☐ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds*

☒ Taxonomy-aligned: Fossil gas
☒ Taxonomy-aligned: Nuclear
☒ Taxonomy-aligned (no fossil gas & nuclear)
☐ Non Taxonomy-aligned

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.no

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Discretionary Swedish Equity Fund

Legal entity identifier: 549300E5MKML6Z5U0690

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invests within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Equity Opportunities Fund

Legal entity identifier: 5493005UW6HUK6IPK402

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

Engagement and stewardship

On behalf of its clients, NAM undertakes a range of engagement activities with investee companies and corporate- and sovereign issuers in order to encourage them to improve their ESG practices, and promote a long-term approach to decision-making.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Euro Bond Fund

Legal entity identifier: 549300QLN77O2B3SSL35

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: ____%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- Average NAM Sovereign ESG Score
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Minimum 10% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

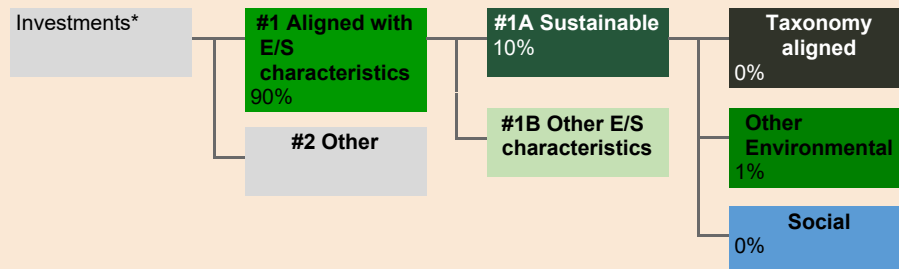

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

- ***What is the policy to assess good governance practices of the investee companies?***
Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 0%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Euro Medium Term Bond Fund

Legal entity identifier: 5493007TZYZJRE6PKR62

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: ____%

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- Average NAM Sovereign ESG Score
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Minimum 10% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

- ***What is the policy to assess good governance practices of the investee companies?***
Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 0%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea European Stars Fund

Legal entity identifier: 54930070IKWTBTWG2U46

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☒

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒

with a social objective

☐

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

The fund is managed according to the Stars investment strategy which includes a commitment to analyse and select investments that epitomise the ESG characteristics of the fund. The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the investee company. Furthermore, each company's business model alignment with relevant UN SDGs is taken into consideration as well as the company's approach to managing ESG risks. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. Stars eligible investments must have an ESG score in the A or B range as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

Engagement and stewardship

On behalf of its clients, NAM undertakes a range of engagement activities with investee companies and corporate- and sovereign issuers in order to encourage them to improve their ESG practices, and promote a long-term approach to decision-making.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded.

- Minimum 50% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

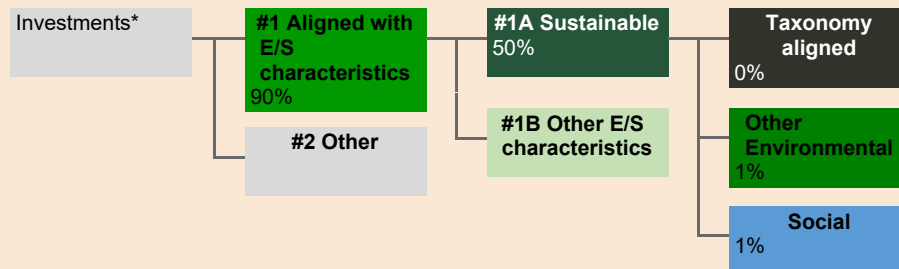

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

The fund is managed according to the Stars investment strategy which includes a commitment to analyse and select investments that epitomise the ESG characteristics of the fund. The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the investee company. Furthermore, each company's business model alignment with relevant UN SDGs is taken into consideration as well as the company's approach to managing ESG risks. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. Stars eligible investments must have an ESG score in the A or B range as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

Engagement and stewardship

On behalf of its clients, NAM undertakes a range of engagement activities with investee companies and corporate- and sovereign issuers in order to encourage them to improve their ESG practices, and promote a long-term approach to decision-making.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund’s holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Fixed Income Credit Opportunities Fund

Legal entity identifier: 5493002WRE7NCMVYTS07

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". ☐

with a social objective

☒

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invests within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Global Dividend Fund

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Hållbarhetsfond Obligationer Global Fund

Legal entity identifier: 549300TJ314IIW1BOW85

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. The strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and ESG laggards are excluded by setting minimum thresholds for ESG scores on investments in individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.se

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea India Fund

Legal entity identifier: 549300Q64X96MTIMYC33

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The fund is a feeder fund that seeks to invest all of its assets (minimum 85%) in the master fund. A maximum of 15% of its assets can be invested in liquid assets and/or in derivatives contracts that can only be used for hedging purposes. By investing in the master fund, the feeder fund promotes the environmental and/or social characteristics of the master fund. Information disclosed for the feeder fund in this template is a replicate of what is presented in the master fund's template.

The E/S characteristics promoted can be environmental and/or social and include the following features:

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?"

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?"

There is no reference benchmark designated for the purpose of attaining the E/S characteristics of the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- % of sustainable investments
- % of investments, aligned with the E/S characteristics, that do not comply with sector and value based exclusions

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund’s investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline “Where can I find more product specific information online?”.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators that are listed in the regulatory technical standards Table 1, annex 1 of the Sustainable Finance Disclosure Regulation. Currently data is mainly available for the use of the indicators listed below. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles. In certain cases where a company does not pass the test on one or more of the above PAI indicators, use-of-proceeds securities issued by such company may be considered sustainable if the proceeds from the issuance of the securities is dedicated to the funding of activities that mitigate the reasons for the company not passing the test.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, Investment teams have access to absolute PAI metrics and/or normalized scale values (e.g. based on NAM's proprietary PAI tool) across multiple PAI indicators, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

The E/S characteristics that are promoted by the fund, are integrated in the investment process on a binding basis as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

Investments are partly dedicated to sustainable investments. The strategy applies sector and value-based exclusions and the fund does not invest in companies that are on Nordea's exclusion list based on their business activities or conduct as further detailed in NAM's Responsible Investment Policy available via the link provided in the section "Where can I find more product specific information online?".

As part of the investment process, companies are screened to ensure that they follow good governance practices.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

Minimum 10% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary methodology. The classification is mainly based on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy. However, for certain asset types like covered bonds and use-of-proceeds bonds, other measures are relevant. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".

Sector- or value-based exclusions prevent investments in companies and issuers that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

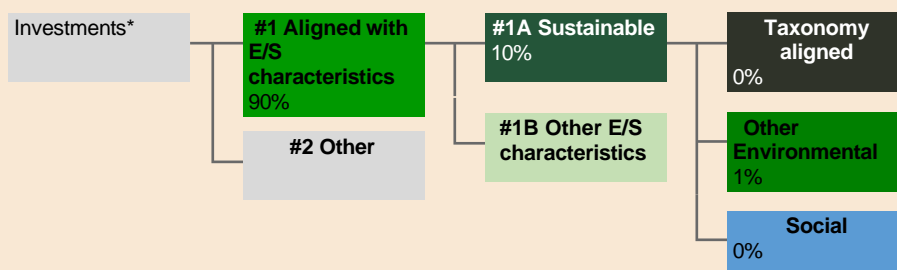

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%. The fund will make a minimum sustainable investment with an environmental objective as displayed in the graph in the section "What is the asset allocation planned for the financial product?".

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable for these investments. The fund may also include exposure to portfolios that as a minimum apply good governance screenings as ESG safeguards and where part of the holdings may not be aligned with the E/S characteristics of the fund.

Where can I find more product specific information online?

More product-specific information can be found on www.nordeafunds.com.

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)
[Exclusion list](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Innovation Stars Fund

Legal entity identifier: 5493003HVF4772ZX8M27

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☒

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒

with a social objective

☐

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

The fund is managed according to the Stars investment strategy which includes a commitment to analyse and select investments that epitomise the ESG characteristics of the fund. The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the investee company. Furthermore, each company's business model alignment with relevant UN SDGs is taken into consideration as well as the company's approach to managing ESG risks. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. Stars eligible investments must have an ESG score in the A or B range as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

Engagement and stewardship

On behalf of its clients, NAM undertakes a range of engagement activities with investee companies and corporate- and sovereign issuers in order to encourage them to improve their ESG practices, and promote a long-term approach to decision-making.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded.

- Minimum 50% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Institutionella Småbolagsfonden Sverige Fund

Legal entity identifier: 549300ZLGQXEJM8TQM79

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.se

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Kreditt Stars Fund

Legal entity identifier: 5493000ZTSPIDSJE0Q50

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section “Where can I find more product specific information online?”.

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

The fund invests according to the Stars investment strategy which includes a commitment to apply the NAM proprietary ESG framework to analyse and select investments that epitomize the ESG characteristics of the fund.

The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the issuer and considers how issuers manage their ESG risk. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. NAM applies a minimum ESG score requirement for inclusion in Stars funds. Stars eligible investments must have an ESG score in the B or A range or equivalent score if using an external provider.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

Engagement and stewardship

On behalf of its clients, NAM undertakes a range of engagement activities with investee companies and corporate- and sovereign issuers in order to encourage them to improve their ESG practices, and promote a long-term approach to decision-making.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 20% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

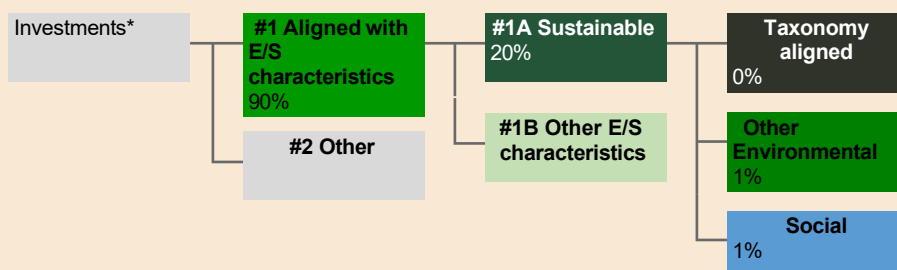

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.no

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Moderate Yield Fund

Legal entity identifier: 549300DJRJLFJJCXBO82

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☐

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

with a social objective

☒

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invests within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.se

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Nordic Fund
Legal entity identifier: 549300UC4ZJ2O8SGHF58

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: ____%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invests within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea North American Dividend Fund

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Norwegian Stars Fund

Legal entity identifier: 549300R6FK8CCVQMSK36

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

The fund is managed according to the Stars investment strategy which includes a commitment to analyse and select investments that epitomise the ESG characteristics of the fund. The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the investee company. Furthermore, each company's business model alignment with relevant UN SDGs is taken into consideration as well as the company's approach to managing ESG risks. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. Stars eligible investments must have an ESG score in the A or B range as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

Engagement and stewardship

On behalf of its clients, NAM undertakes a range of engagement activities with investee companies and corporate- and sovereign issuers in order to encourage them to improve their ESG practices, and promote a long-term approach to decision-making.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded.

- Minimum 50% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.no

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

The fund invests according to the Stars investment strategy which includes a commitment to apply the NAM proprietary ESG framework to analyse and select investments that epitomize the ESG characteristics of the fund.

The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the issuer and considers how issuers manage their ESG risk. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. NAM applies a minimum ESG score requirement for inclusion in Stars funds. Stars eligible investments must have an ESG score in the B or A range or equivalent score if using an external provider.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

Engagement and stewardship

On behalf of its clients, NAM undertakes a range of engagement activities with investee companies and corporate- and sovereign issuers in order to encourage them to improve their ESG practices, and promote a long-term approach to decision-making.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 20% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

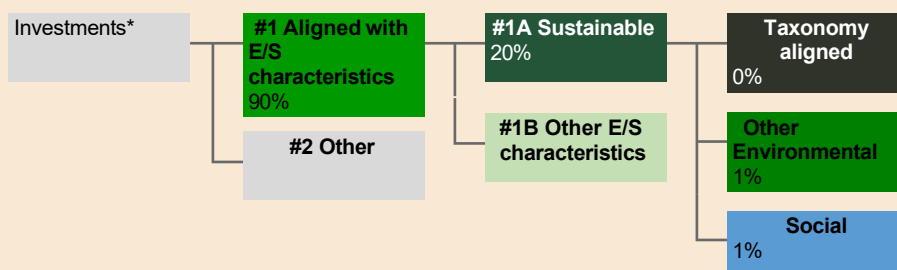

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.no

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Private Banking FRN Fund

Legal entity identifier: 549300N5RYPFRQMN2V74

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invests within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invests within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.no

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Non-UCITS Nordea Private Banking Norsk Aksje Portefølje

Legal entity identifier: 54930069V895HKGF1E87

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

 - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - ☐ with a social objective
 - ☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- Average NAM Sovereign ESG Score
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Minimum 10% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

- ***What is the policy to assess good governance practices of the investee companies?***
Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund’s holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures*

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 0%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Minimum 50% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

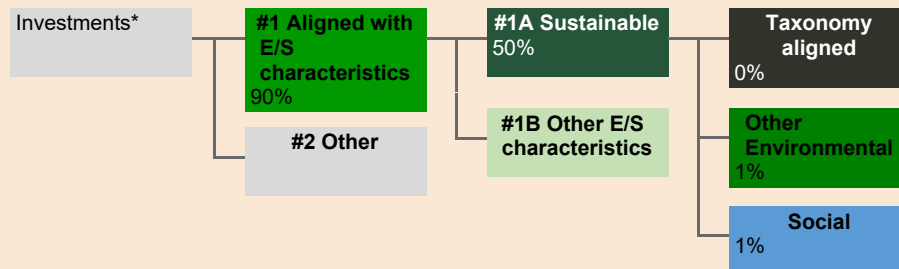

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

- ***What is the policy to assess good governance practices of the investee companies?***
Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Pro Stable Return Fund

Legal entity identifier: 5493007PR1VQ48I12D46

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☐

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

with a social objective

☒

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.se

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Equities Global Fund

Legal entity identifier: 549300884E63XAEKCZ79

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☒

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒

with a social objective

☐

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded.

- Minimum 50% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

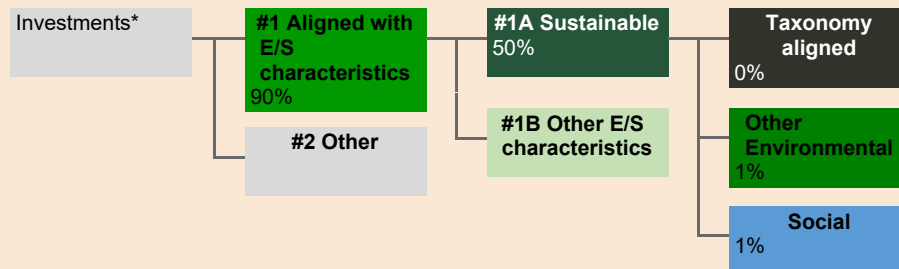

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

- ***What is the policy to assess good governance practices of the investee companies?***
Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund’s holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures*

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Fixed Income Global Fund

Legal entity identifier: 549300ZXFH50WOIVRU97

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☒

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒

with a social objective

☐

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. The strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and ESG laggards are excluded by setting minimum thresholds for ESG scores on investments in individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund’s holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures*

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Balanced Fund

Legal entity identifier: 5493004KN0VPUS35KM57

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☒

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒

with a social objective

☐

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund’s holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures*

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Balanced Fund (NOK)

Legal entity identifier: 549300DDIRYIH6T55H79

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure.

Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring.

Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.no

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Balanced Fund (SEK)

Legal entity identifier: 549300JTDIKITPJOLJ76

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section “Where can I find more product specific information online?”.

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure.

Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring.

Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.se

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Growth Fund

Legal entity identifier: 549300DEN4ZLW33T4067

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☒

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒

with a social objective

☐

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Growth Fund (NOK)

Legal entity identifier: 54930052AMBY5S0HMA76

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section “Where can I find more product specific information online?”.

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure.

Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring.

Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.no

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Growth Fund (SEK)

Legal entity identifier: 5493003WE527W7V5Y298

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section “Where can I find more product specific information online?”.

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure.

Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring.

Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.se

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 30% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

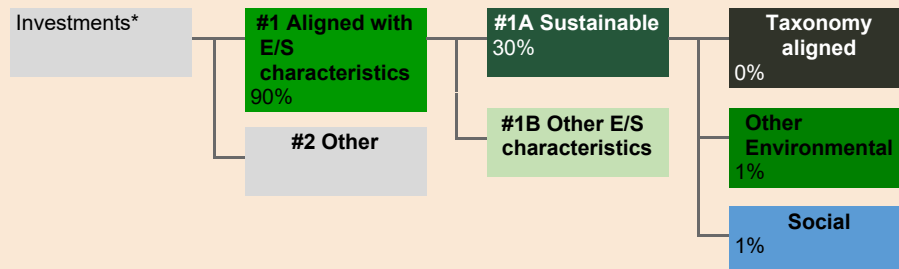

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Moderate Fund (NOK)

Legal entity identifier: 549300WXAN7F7VRL6V22

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section “Where can I find more product specific information online?”.

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 30% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.no

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Moderate Fund (SEK)

Legal entity identifier: 549300S5BYWNDDMOPA16

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section “Where can I find more product specific information online?”.

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 30% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.se

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Return Fund

Legal entity identifier: 5493009PS3FSWJ57AR54

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: ____%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure. Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring. Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Return Fund (NOK)

Legal entity identifier: 5493002CIPYJI4WUEK44

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section “Where can I find more product specific information online?”.

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure.

Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring.

Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.no

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Sustainable Selection Return Fund (SEK)

Legal entity identifier: 549300MPFQKI6DS32K18

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Minimum proportion of sustainable investments The fund promotes E/S characteristics by partially investing in companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices. The process applied to identify sustainable investments is further described below under the headline “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

ESG scoring The fund promotes E/S characteristics by partially making direct investments in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion. The binding measures and thresholds are further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objective of the sustainable investments that the fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contribute to the objectives through the fund's investments in companies where a minimum of 20% of their activity can be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs. The definition of sustainable investments is further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030. For further details, see the link to sustainability related information below under the headline "Where can I find more product specific information online?".

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies are screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test uses PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identifies negative outliers and poor performance related to PAI indicators. The investment manager will consider the PAI indicators from Table 1, annex 1 in the SFDR RTS. Currently data is mainly available for the use of the below indicators. As data quality and availability evolves, additional indicators will be included.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that do not pass the thresholds that are defined by the investment manager, will not qualify as a sustainable investment. This includes companies that are involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also fail the DNSH test if they are among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derive more than 0% of revenue from unconventional fossil fuel fail the DNSH test, and companies that derive more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry will only pass the DNSH test if they are below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and have a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans. It can be found via the link provided below in the section "Where can I find more product specific information online?".

Additional exclusions to further limit negative externalities are applied to the investment universe of the fund, to avoid investment in companies that are involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The fund's exclusion policy is described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?"

The data on PAI indicators needed for the DNSH test is sourced from third party data providers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

E/S characteristics are integrated into the fund's investment strategy, and adherence to exclusions, sustainable investments and ESG scores are monitored on an ongoing basis.

The fund partially invests in other funds that commit to a minimum proportion of sustainable investments. At least 50% of the fund is invested in funds or direct investment portfolios that display a strong sustainability profile by dedicating at least 40% to sustainable investments.

The fund may invest up to 10% in portfolios that do not promote any specific E/S characteristics and the strategy also includes exposure to tactical asset allocation via derivatives which are not aligned with the E/S characteristics of the fund.

Direct investments are screened based on ESG scores and the strategy excludes ESG laggards by setting minimum thresholds for ESG scores on individual companies and issuers as described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

The fund commits to partially making sustainable investments. It is ensured that investee companies are sustainable as per SFDR article 2 (17) using a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy as further detailed in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". The fund does not target a specific contribution to each of the objectives and the allocation between investments contributing to any of the objectives may vary depending on financial metrics and the availability of investment opportunities.

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

- Direct investments made by the fund must meet a minimum ESG score standard. The materiality and relevance of ESG factors vary between sectors and asset classes, and scoring methods are adapted to capture the most relevant ESG factors depending on the nature of the investments. The ESG score set by NAM uses the Sustainability Accounting Standards Board (SASB) materiality map to identify relevant ESG factors. ESG factors may include various indicators related to environmental- or social-impact, business model and governance. ESG factors can have a positive or negative impact on the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis, depending on the product/services and how the company conducts its business. Social factors may include considerations related to indigenous people, human rights and labour rights and environmental factors may include carbon emission, science-based targets or impact of policy measures. Quantitative input based on data from multiple sources, is analysed and translated into a score of A, B or C (or equivalent if using external ESG ratings) with A being the highest score. The scores are a measure of companies' exposure to certain ESG factors and their ability to manage such exposure.

Supplementary manual assessments are made by analysts both where data is insufficient and where additional relevant qualitative information is available that can improve the quality of the scoring.

Numerical ratings for certain assets may be provided by external data vendors and validated by NAM. The fund only invests in companies and issuers with ESG scores in the A and B range, or equivalent if using external ESG ratings, while investments with C scores are excluded. Issuers that are not assigned an ESG score at the time of issuance, are allowed based on a preliminary internal assessment of the ESG profile until a formal score is assigned.

- Minimum 40% of the fund is in investments that are sustainable as per SFDR article 2 (17). Investments are classified as sustainable, using NAM's proprietary process that applies a pass/fail criteria on contribution to one or more of the UN SDGs or one or more of the environmental objectives in the EU Taxonomy, with a 20% threshold. Contribution may be measured on the proportion of revenue that can be linked to the above objectives. For sectors where capital expenditure or operating expenses or other relevant activity measures are more relevant, these will be used. The process also tests good governance as described in the section "What is the policy to assess good governance practices of the investee companies?" and that the companies' activities do no significant harm to other objectives as described in the section "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?".
- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the

section “Where can I find more product specific information online?”.

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance
practices include
sound management
structures,
employee relations,
remuneration of
staff and tax
compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.se

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea SWE Inflation Linked Bond Fund

Legal entity identifier: 5493008X62OV3LG0EM72

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invests within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.se

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Swedish Ideas Equity Fund

Legal entity identifier: 549300IHYK1G12PQD303

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: ____%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invests within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Additional information as referenced in the above sections is available here:

[Responsible Investment Policy](#)
[Exclusion list](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea World Passive Fund

Legal entity identifier: 549300B3ENDTJUGFXQ77

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of **sustainable investments with an environmental objective**: ____%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of **sustainable investments with a social objective**: ____%

☐

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

with a social objective

☒

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by using a dedicated reference benchmark, which determines the fund's investment universe. The exclusions and screenings applied in the benchmark construction process will exclude investments in companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?"

The benchmark used by the fund has been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund. The fund is passively managed and the strategy aims to replicate the return of the benchmark.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- % of total investments in companies violating United Nations Global Compact

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ No, The fund aims to replicate the benchmark return and as a result there is no specific consideration of PAI on product level.

☐ Yes

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

The investment strategy aims at following the development of MSCI World ex Business Involvement and Fossil Fuel Screened Select Index. In addition to the exclusions that are applied to the reference benchmark, companies that are in Nordea's or Norwegian Government Pension Fund's exclusion list are not investable. The link to Nordea's exclusion list is provided in the section "Where can I find more product specific information online?". Further, it is ensured that companies follow good governance using NAM's process as described in the section "What is the policy to assess good governance practices of the investee companies?".

The funds investments may deviate from the benchmark due to these additional measures.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Sector- or value-based exclusions: The MSCI World ex Business Involvement and Fossil Fuel Screened Select Index replicated by the fund, excludes companies that are associated with controversial business activities; involved in unconventional oil and gas extraction, fossil fuel-related activities (thermal coal mining or oil and gas value chain), thermal coal-based power generation, or ownership of metallurgical coal reserves; fail to comply with the United Nations Global Compact principles; or are assessed as having very severe controversies. More information on the exclusions that apply to the benchmark is available on the index providers website. The link is provided in the section "Where can the methodology used for the calculation of the designated index be found?". In addition to the exclusions criteria applicable to MSCI World ex Business Involvement and Fossil Fuel Screened Select Index, the fund does not invest in companies that are on Nordea's exclusion list. Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The fund uses MSCI World ex Business Involvement and Fossil Fuel Screened Select Index, which is aligned with the environmental and social characteristics of the financial product.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

The E/S characteristics that the fund promotes, are attained by investing in global equities while refraining from exposure to fossil fuel activities and other activities that have been deselected based on ESG considerations. The benchmark is screened to identify and exclude companies that are materially involved in such activities.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The fund applies a passive strategy that seeks to replicate the benchmark, and the alignment of the fund's investments with the benchmark composition is monitored on an ongoing basis. In addition to the exclusions criteria applicable to the index by MSCI, the product does not invest in companies that are on Nordea's exclusion list, due to violation of international norms and/or involvement in controversial business activities. Companies that do not pass NAM's good governance test are also excluded from the fund's investment universe.

- ***How does the designated index differ from a relevant broad market index?***

The fund's benchmark, MSCI World ex Business Involvement and Fossil Fuel Screened Select Index, is based on the broad MSCI World Index. It includes large and midcap securities across developed markets countries. The index differs from a broad market index by its value-based exclusions as well as exclusions based on environmental considerations.

- ***Where can the methodology used for the calculation of the designated index be found?***

The benchmark is provided by MSCI, and the methodology for the calculation can be found on MSCI's website www.msci.com/index-methodology.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.

[Responsible Investment Policy](#)

[Exclusion list](#)

[Paris-Aligned Fossil Fuel Policy](#)

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Yield Fund
Legal entity identifier: 549300DNLSOLVCAFQT35

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

What environmental and/or social characteristics are promoted by this financial product?

The E/S characteristics promoted can be environmental and/or social and include the following features:

Sector- and value-based exclusions The fund promotes E/S characteristics by excluding companies that are deemed to be inappropriate based on their business activities or corporate behaviour. The exclusion criteria are further described in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

NAM's Paris-Aligned Fossil Fuel Policy The fund promotes E/S characteristics by refraining from investing in companies that have significant exposure to fossil fuels unless they have a credible transition strategy. More information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”

The benchmark used by the fund has not been designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Investee countries subject to social violations (absolute and relative)
- % of total investments in companies violating United Nations Global Compact
- Greenhouse Gas Intensity for sovereigns

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No

☒ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM's investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAI metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors is available in the annual report to be disclosed pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The general investment policy of the fund, including investment universe and benchmark, is further detailed in the KID for the fund.

As part of the investment strategy, companies and issuers are excluded from the fund's investment universe if they are involved in certain activities that are deemed to be harmful to the environment or the society at large. Investments are also screened for adherence to OECD Guidelines for Multinational Enterprises and the UN Guiding Principles. It is controlled on an ongoing basis that the fund's investments are aligned with the applicable exclusions as outlined in the below section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

As part of the investment process, investee companies are screened to ensure that they follow good governance practices.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Sector- or value-based exclusions prevent investments in companies that are involved in serious breaches of international norms where engagement is deemed not to be possible or effective. Companies engaging in certain activities that are deemed to have significant negative climate or environmental impact, like thermal coal or production of fossil fuels from oil sands and arctic drilling, are also excluded, as well as companies active in the production of controversial weapons and companies involved in pornography. Companies' exposure to certain activities may be measured on production, distribution or revenue contribution depending on the nature of the activity, and thresholds may apply for the purpose of exclusions. A link to the list of excluded companies, as well as the Responsible Investment Policy further detailing the process, is provided below in the section "Where can I find more product specific information online?". The investments in the fund are also subject to specific exclusions that limit exposure to certain activities that are incompatible with the fund's investment profile or deemed to be detrimental to the environment or society at large. The specific additional exclusions that apply to the fund can be found in the sustainability-related website disclosures through the link provided below in the section "Where can I find more product specific information online?".
- The fund adheres to NAM's Paris-Aligned Fossil Fuel Policy that sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the fund will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement. A link to a description of NAM's Paris-Aligned Fossil Fuel Policy is provided below in the section "Where can I find more product specific information online?".

The binding elements are documented and monitored on an ongoing basis by NAM. Separately, Nordea Funds has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging, especially for smaller companies and less developed markets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed in various layers of the security selection process of direct investments. Companies are screened for good governance by assessing, among other elements, their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars: 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

The fund commits to minimum proportion of investments as illustrated below. Where no percentage proportion or 0% is displayed, such investments may be relevant for the strategy but the fund is not committed to holding a specific proportion at all times, and the proportion of such investments may be as low as 0% at the investment manager's discretion.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*Investments refer to the fund's NAV which is the total market value of the fund.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The minimum proportion of investments that are aligned with the EU Taxonomy is 0%. Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this fund. It cannot be excluded that some of the fund's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The fund may use derivatives and other techniques for the purposes described in the KID for the fund. This category may also include securities for which relevant data is not available. Minimum environmental or social safeguards are not applicable.

Where can I find more product specific information online?

More product-specific information can be found on www.nordea.fi

Sustainability-related website disclosure for the fund can be found through the link for product-specific information provided above.
